

MILLIPORE

CHEMICON, UPSTATE AND LINCO ARE NOW A PART OF MILLIPORE

Mouse anti-NF-L neurons

Rabbit anti-Nestin staining of U251 cells

Rabbit anti-CNGA3 neurons

Chicken anti-GFAP cells

With recent acquisitions and the development of a new research and development center, Millipore has the most complete offering of products and services for life sciences research and the discovery and development of novel therapeutics and diagnostics. The company's technologies are used within the areas of neurology, cell signaling, oncology, hematology, immunology, cardiology, proteomics, infectious diseases, stem cell research and molecular biology.

The Serologicals acquisition is one of the most strategic in recent Millipore history and represents a forward-thinking approach that will benefit our customers.

Chemicon offers a broad range of research products, including specialty antibodies, proteins, cell lines, media and other reagents and tools for customers focused on the areas of neuroscience, infectious disease, oncology, and stem cell research; the company also supplies monoclonal antibodies, conjugates and biologically-based detection kits for use in diagnostic laboratories.

Upstate provides a wide range of research products and services, including specialty reagents, monoclonal antibodies, proteins, and kits utilized in cell signaling research and compound screening against kinases, ion channels and GPCR's to increase the efficiency of compound selection and assist in detecting potentially toxic side effects from new therapeutic compounds.

Linco develops immunoassay kits for detection and identification of proteins to facilitate research in metabolic diseases, such as diabetes, obesity, and cardiovascular disease.

The entire best selling range is now available to you from Millipore India.
