

# Indexes to Volume 56

## SUBJECT INDEX

### Rapid Communication

- Quantum hysteresis loops in microscopic system: The loop area as a dynamical parameter *Chandan Kumar Mondal and S P Bhattacharyya* L117–L126
- Magnetization curves for non-elliptic cylindrical samples in a transverse field  
*Debjani Karmakar and K V Bhagwat* L127–L135
- Quantum entanglement in the NMR implementation of the Deutsch–Jozsa algorithm  
*Arvind, Kavita Dorai and Anil Kumar* L705–L713

### Review Article

- A review of the microscopic modeling in the 5-dim. black hole of IIB string theory  
*Spenta R Wadia* 1–46
- The gravitational wave symphony of the Universe *B S Sathyaprakash* 457–476

### Atomic and Molecular Physics

- Calculating pure rotational transitions of water molecule with a simple Lanczos method  
*Pranab Sarkar* 537–544
- Positron impact ionization of atomic hydrogen at low energies  
*K Chakrabarti* 545–550
- A new method for the calculation of Sommerfeld screening parameter  $\sigma_1$  in x-ray spectra  
*U D Misra and S Chaturvedi* 745–754

### Quantum Mechanics

- Bell's inequalities and Kolmogorov's axioms *David Atkinson* 139–152
- First experimental test of Bell inequalities performed using a non-maximally entangled state  
*M Genovese, G Brida, C Novero and E Predazzi* 153–160
- Test of Bell's inequality using the one-atom micromaser  
*A S Majumdar and N Nayak* 161–168
- Quantum Zeno and anti-Zeno paradoxes *S M Roy* 169–178
- Facets of tripartite entanglement *Dipankar Home* 179–188

Unsharp spin observables, non-locality and Fry, Walther and Li experiment	<i>Sisir Roy</i>	189–198
Backward causation, hidden variables and the meaning of completeness	<i>Huw Price</i>	199–210
An experiment to distinguish between de Broglie-Bohm and standard quantum mechanics	<i>Partha Ghose</i>	211–216
Quantum mechanics for two-timers	<i>P Mitra</i>	217–222
Classical topology and quantum states	<i>A P Balachandran</i>	223–238
A verification of quantum field theory – measurement of Casimir force	<i>Anushree Roy and U Mohideen</i>	239–244
Operator properties of generalized coherent state systems	<i>N Mukunda</i>	245–266
Nonlinear wave packet dynamics of coherent states	<i>J Banerji</i>	267–280
Near-noiseless amplification of light by a phase-sensitive fibre amplifier	<i>Dmitry Levandovsky, Michael Vasilyev and Prem Kumar</i>	281–286
Observing SU(2) phases with neutrons	<i>Veer Chand Rakhecha and Apoorva G Wagh</i>	287–304
Density operator description of geometric phenomena in the ray space	<i>Apoorva G Wagh and Veer Chand Rakhecha</i>	305–320
A unified view on Aharanov–Bohm like phases and some applications	<i>C S Unnikrishnan</i>	321–332
From Schrödinger’s equation to the quantum search algorithm	<i>Lov K Grover</i>	333–348
Causality, relativity and quantum correlation experiments with moving reference frames	<i>H Zbinden, J Brendel, W Tittel and N Gisin</i>	349–356
Quantum entanglement and quantum computational algorithms	<i>Arvind</i>	357–366
Quantum algorithms and the genetic code	<i>Apoorva Patel</i>	367–382
Teleportation via decay	<i>S Bose, P L Knight, M B Plenio and V Vedral</i>	383–392
Interference due to coherence swapping	<i>Arun Kumar Pati and Marek Zukowski</i>	393–402
Cloning and superluminal signaling	<i>Sibasish Ghosh</i>	403–410
Spin tunneling in mesoscopic systems	<i>Anupam Garg</i>	411–424
Complex wave-interference phenomena: From the atomic nucleus to mesoscopic systems to microwave cavities	<i>Pier A Mello</i>	425–438

- Novel interference effects and a new quantum phase in mesoscopic systems  
*P Singha Deo and A M Jayannavar* 439–452

### Cosmology

- Stochastic evolution of cosmological parameters in the early universe  
*C Sivakumar, Moncy V John and K Babu Joseph* 477–486
- On the absence of scalar hair for charged rotating black holes in non-minimally coupled theories  
*S Sen and N Banerjee* 487–502
- Spherically symmetric inhomogeneous dust collapse in higher dimensional space-time and cosmic censorship hypothesis  
*K D Patil, S H Ghate and R V Saraykar* 503–512
- Bianchi type IX string cosmological model in general relativity  
*Raj Bali and Shuchi Dave* 513–518
- Inheriting geodesic flows  
*D B Lortan, S D Maharaj and N K Dadhich* 715–722

### General Relativity and Gravitation

- On conformally related *pp*-waves  
*Varsha Daftardar-Gejji* 591–596
- Generalized scalar tensor theory in four and higher dimensional spherically symmetric space-time  
*Subenoy Chakraborty and Arabinda Ghosh* 597–604

### Statistical Physics

- A plethora of strange nonchaotic attractors  
*Surendra Singh Negi and Ramakrishna Ramaswamy* 47–56

### Particle Physics

- Unpolarized structure functions and the parton distributions for nucleon in an independent quark model  
*N Barik and R N Mishra* 519–536

### Nuclear Physics

- Study of  $\Lambda\Lambda$  dynamics and ground state structure of low and medium mass double  $\Lambda$  hypernuclei  
*Md Abdul Khan and Tapan Kumar Das* 57–76
- Resonance propagation in heavy-ion scattering  
*Bijoy Kundu and B K Jain* 723–734
- Decay energy of  $^{55}\text{Fe}$  from its inner Bremsstrahlung spectrum  
*S L Keshava, K Gopala and P Venkataramaiah* 735–744

### Plasma Physics

- Effect of radiative cooling on collapsing charged grains  
*B P Pandey, Vinod Krishan and M Roy* 95–106

- The influence of a transverse magnetic field on a subnormal glow discharge in air *D C Jana and S S Pradhan* 107–116
- RF breakdown by toroidal helicons *S K P Tripathi, D Bora and M Mishra* 551–558
- Theory of sheath in a collisional multi-component plasma  
*M K Mahanta and K S Goswami* 579–584
- Stability-transport modeling of the SINP tokamak discharges  
*S Lahiri, S Mukhopadhyay, A N S Iyengar and R Pal* 615–624
- Linear theory of plasma filled backward wave oscillator *Preeti Vyas, Arti Gokhale, Y Choyal and K P Maheshwari* 625–634
- Ultra-low-frequency dust-electromagnetic modes in self-gravitating magnetized dusty plasmas *A K Banerjee, M N Alam and A A Mamun* 643–656
- Relativistic nonlinearity and wave-guide propagation of rippled laser beam in plasma *R K Khanna and K Baheti* 755–766
- Role of magnetic shear on the electrostatic current driven ion-cyclotron instability in the presence of parallel electric field  
*Harsha Jalori and A K Gwal* 779–784
- Propagation of waves in a multicomponent plasma having charged dust particles  
*Sukanya Burman, A Roy Chowdhury and S N Paul* 785–796
- Laser, Optics and Spectroscopy**
- Measurement of  $\sigma\tau$  product of solid state laser materials by an alternative method: Application to  $\text{Nd}^{3+}$  doped  $\text{YVO}_4$  crystal for  ${}^4F_{3/2} \rightarrow {}^4I_{11/2}$  transition  
*P K Mukhopadhyay, Jogy George, S K Sharma, Rakesh Kapoor and T P S Nathan* 77–86
- Overlapping  $B^3\pi_{0u} \leftarrow X^1\Sigma_g^+$  and  ${}^1\Pi_{1u} \leftarrow X^1\Sigma_g^+$  non-radiative characteristic of  $\text{Br}_2$  vapour in the wavelength region 505–541 nm  
*Ramesh C Sharma and S N Thakur* 87–94
- Photon transport in thin disordered slabs *Venkatesh Gopal, S Anantha Ramakrishna, A K Sood and N Kumar* 767–778
- Overtone spectroscopy of some benzaldehyde derivatives  
*P K Srivastava, D K Rai and S B Rai* 823–830
- Experimental Techniques**
- Time dependent argon glow discharge treatment of Al-alloy samples  
*Sunanda J Karandikar, S V Gogawale, A K Dua and K K Kutty* 635–642

**Condensed Matter Physics**

- Effect of three-body forces on the lattice dynamics of noble metals  
*P R Vyas, C V Pandya, T C Pandya and V B Gohel* 559–568
- Critical behavior of electrical resistivity in amorphous Fe–Zr alloys  
*A Perumal* 569–578
- Calculation of minor hysteresis loops under metastable to stable transformations in vortex matter  
*P Chaddah and M Manekar* 657–666
- Experimental evidence of photoinduced valence change of Fe<sup>3+</sup> in BaTiO<sub>3</sub> and mechanism for growth of new grating in depleted pump condition: An EPR investigation  
*M D Sastry, M Moghbel, Putcha Venkateswarlu and A Darwish* 667–684
- Phase stabilization in cinnarizine complexes using X-ray profile analysis  
*G Nagendrappa, S Subramanya Raj Urs, M S Madhava and R Somashekar* 797–808
- Analytic methods for field induced tunneling in quantum wells with arbitrary potential profiles  
*S Panda and B K Panda* 809–822

**Geophysics**

- VLF emissions from ionospheric/magnetospheric plasma  
*R P Patel and R P Singh* 605–614

**Brief Reports**

- Gauge transformation between retarded and multipolar gauges *A M Stewart* 685–690
- On the computation of molecular auxiliary functions  $A_n$  and  $B_n$   
*I I Guseinov, B A Mamedov, M Kara and M Orbay* 691–696
- Measurement of  $K_\beta/K_\alpha$  values using proton beam *G A V Ramanamurthy, K Ramachandra Rao, Y Rama Krishna, P Venkateswarlu, K Bhaskara Rao, P V Ramana Rao, S Venkata Ratnam, V Seshagiri Rao, G J Nagaraju and S Bhuloka Reddy* 697–704

**Comment**

- Dissociation energy of diatomic molecules – comment on the work of Kaur and Mahajan  
*Suresh Chandra* C585–C588

**Erratum**

- Basic physics of colloidal plasmas *C B Dwivedi* 589
