Photochemistry, Laser Chemistry and Photobiology – Fundamentals and Applications

Foreword

Research activities concerning the interaction of light with matter have attracted scientists from diverse disciplines covering physics, chemistry, biology and technology. A seminar under the title “Photochemistry, Laser Chemistry and Photobiology – Fundamentals and Applications”, was jointly organised during Jan 7–9, 1991, by the Indian Photobiology Society, the University of Madras and the Council of Scientific and Industrial Research to bring together researchers working in different areas of photosciences. The present volume represents the proceedings of the conference which includes the lectures and abstracts of the posters presented at the seminar. Thanks are due to the editors for bringing out this volume in the Academy journal.
