

# **Frontiers in Chemistry**

## **Foreword**

This issue of the Proceedings contains research articles on diverse topics of chemistry and related areas written by some of the foremost practitioners of the subject in India. The contents covered by each article are a part of the presentation made at the national symposium on 'Frontiers in Chemistry' held in Bangalore during December 17–18, 1993. The symposium was held in honour of Professor C N R Rao to commemorate his attaining the age of sixty. The articles in this issue span a wide range of interests traversing physical, solid state, inorganic, organic and biochemistries. It is sincerely hoped that this issue gives a flavour of the wide cross-section of research in chemistry and allied areas being carried out in leading laboratories in the country.

November 1994
