

# Modern Trends in Inorganic Chemistry

## FOREWORD

This Special Issue is based on the lectures and oral presentations made at the Eleventh Symposium on Modern Trends in Inorganic Chemistry (MTIC-XI) held at the Indian Institute of Technology – Delhi, New Delhi during December 8–10, 2005. The MTIC series of symposia (held once in two years) have emerged as a primary forum for the scientific fraternity of the country to focus on the current status and future projections of research in frontier areas of inorganic chemistry, including organometallics, bio-inorganic chemistry, catalysis and materials chemistry.

We do hope that the wide range of topics covered in this Issue reflect the current trends of research in inorganic chemistry in India and practitioners of inorganic chemistry will find the issue useful.

We thank the Indian Academy of Sciences, Bangalore for their support and the Editor for his cooperation and encouragement. We are grateful to the authors for their excellent contributions and reviewers for their timely and valuable help.
