SUBJECT INDEX

II_1 factor
Invariants for normal completely positive maps on the hyperfinite II_1 factor 411

Amenability
Remarks on $B(H) \otimes B(H)$ 423
Applications of $\mathcal{S}$-unit equations
Arithmetic properties of the Ramanujan function 1
Atiyah–Hirzebruch spectral sequence
On the classification of complex vector bundles of stable rank 271
Atiyah–Singer index theorem
On the classification of complex vector bundles of stable rank 271
Automorphisms
Generalized unitaries and the Picard group 429

Banach function spaces
Matrix multiplication operators on Banach function spaces 71
Bicompleteness
Quotient normed cones 175
Biholomorphic automorphisms
On CNC commuting contractive tuples 299
Binomial identities
n-Colour self-inverse compositions 257
Bloch's conjecture
Zero cycles on certain surfaces in arbitrary characteristic 37
Boundary value problems
The embedding method for linear partial differential equations in unbounded and multiply connected domains 361

C^*-algebra
Remarks on $B(H) \otimes B(H)$ 423
C^*-tensor products
Remarks on $B(H) \otimes B(H)$ 423
Cauchy problem
Formulation of the problem of sonic boom by a maneuvering aerofoil as a one-parameter family of Cauchy problems 97
Characteristic function
On CNC commuting contractive tuples 299
Chern class
On the classification of complex vector bundles of stable rank 271
Clarke subdifferential
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Closed operators
Matrix multiplication operators on Banach function spaces 71
Cocycle
Representations of homogeneous quantum Lévy fields 477
Coincidence
On CNC commuting contractive tuples 299
Common invariant subspaces
Joint local quasinilpotence and common invariant subspaces 317
Commuting tuples
Minimal Cuntz–Krieger dilations and representations of Cuntz–Krieger algebras 193
Compact operators
Matrix multiplication operators on Banach function spaces 71
Complete positivity
Minimal Cuntz–Krieger dilations and representations of Cuntz–Krieger algebras 193
Completely positive map
Invariants for normal completely positive maps on the hyperfinite II_1 factor 411
Completion problem
Corners of normal matrices 393
Compositions
n-Colour self-inverse compositions 257
Conditionally positive definite
Representations of homogeneous quantum Lévy fields 477

Conservation laws
Formulation of the problem of sonic boom by a maneuvering aerofoil as a one-parameter family of Cauchy problems 97
Continuous linear mapping
Quotient normed cones 175
Contraction semigroup
Construction of some quantum stochastic operator cocycles by the semigroup method 519
Convex body
On p-quermassintegral differences function 221
Correspondences
Boundary regularity of correspondences in $\mathbb{C}^n$ 59
Critical point
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Cuntz algebras
Minimal Cuntz–Krieger dilations and representations of Cuntz–Krieger algebras 193
Cuntz–Krieger algebras
Minimal Cuntz–Krieger dilations and representations of Cuntz–Krieger algebras 193

Determinantal varieties
Standard monomial bases and geometric consequences for certain rings of invariants 9
Differential ideals
Maximally differential ideals in regular local rings 267
Differential structure in C^*-algebras
Enveloping σ-C^*-algebra of a smooth Frechet algebra crossed product by $\mathbb{R}$, K-theory and differential structure in C^*-algebras 161
Dilation
Minimal Cuntz–Krieger dilations and representations of Cuntz–Krieger algebras 193
Corners of normal matrices 393
Discrete Heisenberg group
The abstruse meets the applicable: Some aspects of time-frequency analysis 121
Divisor
The Jacobian of a nonorientable Klein surface, II 51
Double resonance
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Dual
Quotient normed cones 175

Eigenvalue
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Elliptic equation
Formulation of the problem of sonic boom by a maneuvering aerofoil as a one-parameter family of Cauchy problems 97
Enveloping σ-C^*-algebra
Enveloping σ-C^*-algebra of a smooth Frechet algebra crossed product by $\mathbb{R}$, K-theory and differential structure in C^*-algebras 161
Extended quasi-metric
Quotient normed cones 175

Fake projective planes
Zero cycles on certain surfaces in arbitrary characteristic 37
Fermi golden rule
Schrödinger operators on the half line: Resolvent expansions and the Fermi golden rule at thresholds 375
Flag manifold
On the classification of complex vector bundles of stable rank 271
Fock space
Stochastic integral representations of quantum martingales on multiple Fock space 489
Frechet *-algebra
Enveloping σ-C^*-algebra of a smooth Frechet algebra crossed product by $\mathbb{R}$, K-theory and differential structure in C^*-algebras 161
Fredholm operators
Matrix multiplication operators on Banach function spaces 71

Functional model
On CNC commuting contractive tuples 299

Gabor frames
The abstruse meets the applicable: Some aspects of time-frequency analysis 121
Generating functional
Representations of homogeneous quantum Lévy fields 477
Generating functions
n-Colour self-inverse compositions 257
Gromov–Witten classes
Gromov–Witten invariants and quantum cohomology 459

Hausdorff matrix
Inequalities involving upper bounds for certain matrix operators 325
Hemivariational inequality
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Hermite operator
Sobolev spaces associated to the harmonic oscillator 337
Hilbert matrix
Inequalities involving upper bounds for certain matrix operators 325
Hilbert modules
Generalized unitaries and the Picard group 429
Hilbert space
On Nyman, Beurling and Baez-Duarte's Hilbert space reformulation of the Riemann hypothesis 137
Hyperbolic plane
Non-Euclidean visibility problems 147

Independent increments
Representations of homogeneous quantum Lévy fields 477
Inequality
Inequalities involving upper bounds for certain matrix operators 325
Infinite divisibility
Representations of homogeneous quantum Lévy fields 477
Invariant subspaces
On CNC commuting contractive tuples 299
Invariants
Standard monomial bases and geometric consequences for certain rings of invariants 9
Irrational rotation C^*-algebras
Invariants for normal completely positive maps on the hyperfinite II_1 factor 411
Isometries
Nice surjections on spaces of operators 401

Jacobian variety
The Jacobian of a nonorientable Klein surface, II 51
J-holomorphic curves
Gromov–Witten invariants and quantum cohomology 459
Joint local quasinilpotence
Joint local quasinilpotence and common invariant subspaces 317

Klein surface
The Jacobian of a nonorientable Klein surface, II 51
K-theory
Enveloping σ-C^*-algebra of a smooth Frechet algebra crossed product by $\mathbb{R}$, K-theory and differential structure in C^*-algebras 161
On the classification of complex vector bundles of stable rank 271

Local linking
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Local weight
Pro-torus actions on Poincaré duality spaces 293
Locally Lipschitz function
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Lorentz sequence space
Inequalities involving upper bounds for certain matrix operators 325

Malliavin calculus without probability
Malliavin calculus of Bismut type without probability 507
Markov processes
On characterisation of Markov processes via martingale problems 83
Martingale problem
On characterisation of Markov processes via martingale problems 83
Matrix multiplication operators
Matrix multiplication operators on Banach function spaces 71
Maximally differential ideals
Maximally differential ideals in regular local rings 267
Modular group
Non-Euclidean visibility problems 147
Moduli spaces
Gromov–Witten invariants and quantum cohomology 459
Monoid
Representations of homogeneous quantum Lévy fields 477
m-Tempered action
Enveloping σ-C^*-algebra of a smooth Frechet algebra crossed product by $\mathbb{R}$, K-theory and differential structure in C^*-algebras 161

n-Colour compositions
n-Colour self-inverse compositions 257
Nice surjections
Nice surjections on spaces of operators 401
Nonsmooth Cerami condition
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Norm
Inequalities involving upper bounds for certain matrix operators 325
Corners of normal matrices 393
Normal matrix
Corners of normal matrices 393
Normed cone
Quotient normed cones 175
Nuclearity
Remarks on $B(H) \otimes B(H)$ 423

Partial differential equations
The embedding method for linear partial differential equations in unbounded and multiply connected domains 361
Path properties
On characterisation of Markov processes via martingale problems 83
Planar algebras over general fields
The planar algebra of a semisimple and cosemisimple Hopf algebra 443
Poincaré duality space
Pro-torus actions on Poincaré duality spaces 293
Poincaré half-plane model
Non-Euclidean visibility problems 147
Positive operators
Joint local quasinilpotence and common invariant subspaces 317
Potential spaces
Sobolev spaces associated to the harmonic oscillator 337
Projection body
On p-quermassintegral differences function 221
Pro-torus
Pro-torus actions on Poincaré duality spaces 293

Quantum cohomology
Gromov–Witten invariants and quantum cohomology 459
Quantum group
On equivariant Dirac operators for $SU_q(2)$ 531
Quantum Lévy process
Representations of homogeneous quantum Lévy fields 477
Quantum martingale
Stochastic integral representations of quantum martingales on multiple Fock space 489
Quantum probability
Construction of some quantum stochastic operator cocycles by the semigroup method 519
Quantum stochastic differential equation
Construction of some quantum stochastic operator cocycles by the semigroup method 519
Quantum stochastic integral
Stochastic integral representations of quantum martingales on multiple Fock space 489

Quantum stochastic process
Stochastic integral representations of quantum martingales on multiple Fock space 489
Quermassintegral difference function
On p-quermassintegral differences function 221
Quotient cone
Quotient normed cones 175

Ramanujan τ-function
Arithmetic properties of the Ramanujan function 1
Ray theory
Formulation of the problem of sonic boom by a maneuvering aerofoil as a one-parameter family of Cauchy problems 97
Recurrence formulas
n-Colour self-inverse compositions 257
Reduction method
Multiplicity of nontrivial solutions for elliptic equations with nonsmooth potential and resonance at higher eigenvalues 233
Regular rings
Maximally differential ideals in regular local rings 267
Representations
Generalized unitaries and the Picard group 429
Representations of homogeneous quantum Lévy fields 477
Resonance
Schrödinger operators on the half line: Resolvent expansions and the Fermi golden rule at thresholds 375
Riemann hypothesis
On Nyman, Beurling and Baez-Duarte's Hilbert space reformulation of the Riemann hypothesis 137
Riesz transforms
Sobolev spaces associated to the harmonic oscillator 337

Schrödinger operator
Schrödinger operators on the half line: Resolvent expansions and the Fermi golden rule at thresholds 375
Segre varieties
Boundary regularity of correspondences in $\mathbb{C}^n$ 59
Self-inverse compositions
n-Colour self-inverse compositions 257
Semigroup
On characterisation of Markov processes via martingale problems 83
Semigroups
Matrix multiplication operators on Banach function spaces 71
On Nyman, Beurling and Baez-Duarte's Hilbert space reformulation of the Riemann hypothesis 137
Semisimple and cosemisimple Hopf algebras
The planar algebra of a semisimple and cosemisimple Hopf algebra 443
Sequences
n-Colour self-inverse compositions 257
Shock propagation
Formulation of the problem of sonic boom by a maneuvering aerofoil as a one-parameter family of Cauchy problems 97
Singular surfaces
Zero cycles on certain surfaces in arbitrary characteristic 37
Smooth crossed product
Enveloping σ-C^*-algebra of a smooth Frechet algebra crossed product by $\mathbb{R}$, K-theory and differential structure in C^*-algebras 161
Sonic boom
Formulation of the problem of sonic boom by a maneuvering aerofoil as a one-parameter family of Cauchy problems 97
Spaces of operators
Nice surjections on spaces of operators 401
Spectral triple
On equivariant Dirac operators for $SU_q(2)$ 531
Standard monomials
Standard monomial bases and geometric consequences for certain rings of invariants 9
Stochastic cocycle
Construction of some quantum stochastic operator cocycles by the semigroup method 519
Summability matrix
Inequalities involving upper bounds for certain matrix operators 325
Symmetry
Representations of homogeneous quantum Lévy fields 477

The Brunn–Minkowski inequality
On p-quermassintegral differences function 221
The embedding method
The embedding method for linear partial differential equations in unbounded and multiply connected domains 361
Threshold eigenvalue
Schrödinger operators on the half line: Resolvent expansions and the Fermi golden rule at thresholds 375
Time-frequency analysis
The abstruse meets the applicable: Some aspects of time-frequency analysis 121
Total set
On Nyman, Beurling and Baez-Duarte's Hilbert space reformulation of the Riemann hypothesis 137
Trotter–Kato
Construction of some quantum stochastic operator cocycles by the semigroup method 519

Unbounded and multiply connected domains
The embedding method for linear partial differential equations in unbounded and multiply connected domains 361
Uniform joint local quasinilpotence
Joint local quasinilpotence and common invariant subspaces 317
Unitary matrix
Corners of normal matrices 393

Weighted sequence space
Inequalities involving upper bounds for certain matrix operators 325
