

Indexes to Volume 57

SUBJECT INDEX

Atomic and Molecular Physics

Rovibrational matrix elements of the multipole moments and of the polarizability of the H₂ molecule in the solid phase: Effect of intermolecular potential
Adya Prasad Mishra and T K Balasubramanian 727–732

Quantum Mechanics

Statistical constraints on state preparation for a quantum computer
Subhash Kak 683–687

Particle Physics

Measuring the top quark mass in the $e\mu$ channel: A study
Rajwant Kaur, Suman B Beri and J M Kohli 689–700

Nuclear Physics

Evolution of nuclear spectroscopy at Saha Institute of Nuclear Physics
P Mukherjee 5–9

Physics at the closed shells
G de France 11–20

Nuclear structure and Indian Clover array
H C Jain 21–30

Microscopy of femtoscale structures
P Chowdhury 31–40

Nuclear structure studies at Saha Institute of Nuclear Physics using gamma detector arrays
P Banerjee 41–55

Nuclear physics with simple and multi-element detectors and with stable and radioactive beams
Neil Rowley 57–66

Spallation reactions studied with 4π -detector arrays
J Galin 67–73

Light charged particle emission in heavy-ion reactions – What have we learnt?
S Kailas 75–84

Neutron-induced reaction cross-section measurements using a small multi-detector array and description of a large array
J-P Meulders, I Slypen, S Benck, E Raeymackers, J Cabrera, Ch Dufauquez, T Keutgen, V Roberfroid, I Tilquin, Y El Masri, V Corcalciuc and N Nica 85–95

- The experimental study of exotic nuclear states using multi-detector arrays
D L Watson 97–103
- Multifragmentation and dynamics in heavy ion collisions
R Roy 105–113
- The leak microstructure
*M Lombardi, C Baiocchi,
 A Battistella, G Balbinot, H Huo-Ja Guoxiang and F S Lombardi* 115–124
- Instrumentation for multi-detector arrays
R K Bhowmik 125–133
- Data acquisition for experiments with multi-detector arrays
*A Chatterjee, Sushil Kamerkar, A K Jethra, S Padmini,
 M P Diwakar, S S Pande and M D Ghodgaonkar* 135–139
- A BaF₂ crystal array for high energy γ -ray measurements
A Ray, S R Banerjee and P Das 141–147
- MEGHNAD – A multi element detector array for heavy ion collision studies
Satyajit Saha 149–159
- Gamma-ray spectroscopy with relativistic exotic heavy-ions
*Samit Mandal, J Gerl, H Geissel, K Hauschild, M Hellström, Z Janas,
 I Kojouharov, Y Kopatch, R C Lemmon, P Mayet, Z Podolyak,
 P H Regan, H Schaffner, C Schlegel, J Simpson and H J Wollersheim* 161–164
- Level structures of ^{95,97}Mo – A comparative study
*J M Chatterjee,
 M Saha Sarkar, S Bhattacharya, P Banerjee, S Sarkar, R P Singh,
 S Muralithar and R K Bhowmik* 165–169
- Particle-rotor-model calculations in ¹²⁵I
*Hariprakash Sharma, B Sethi,
 P Banerjee, Ranjana Goswami, R K Bhandari and Jahan Singh* 171–174
- High spin spectroscopy of ¹³⁹Pr
*S Chanda,
 Sarmishtha Bhattacharyya, Tumpa Bhattacharjee, S S Ghugre,
 Swapan Kumar Basu, S Muralithar, R P Singh, B Mukherjee,
 R K Bhowmik and S N Ray* 175–179
- High spin rotational bands in ⁶⁵Zn
*B Mukherjee, S Muralithar,
 R P Singh, R Kumar, K Rani and R K Bhowmik* 181–184
- High-spin structure of yrast-band in ⁷⁸Kr
*P K Joshi, R Palit, H C Jain,
 S Nagaraj and J A Sheikh* 185–189
- Structure of ^{72,74}Se at high spin
*R Palit, H C Jain, P K Joshi
 and J A Sheikh* 191–194

- Fusion around the barrier for ${}^7\text{Li} + {}^{12}\text{C}$ *A Mukherjee, M Dasgupta, D J Hinde, C R Morton, A C Berriman, R D Butt, J O Newton and H Timmers* 195–198
- Measurement of fission anisotropy for ${}^{16}\text{O} + {}^{181}\text{Ta}$ *Bivash R Behera, Subinit Roy, P Basu, M K Sharan, S Jena, M Satpathy, M L Chatterjee and S K Datta* 199–202
- Deformation effects in the ${}^{28}\text{Si} + {}^{12}\text{C}$ and ${}^{28}\text{Si} + {}^{28}\text{Si}$ reactions
C Bhattacharya, M Rousseau, C Beck, V Rauch, R M Freeman, R Noujcer, F Haas, O Dorvaux, K Eddahbi, P Papka, O Stezowski, S Szilner, D Mahboub, A Szanto De Toledo, A Hachem, E Martin and S J Sanders 203–207
- Breakup of 42 MeV ${}^7\text{Li}$ projectiles in the fields of ${}^{12}\text{C}$ and ${}^{197}\text{Au}$ nuclei
Dhruba Gupta, C Samanta, R Kanungo, P Basu, Subinit Roy, S Kailas, A Chatterjee, B J Roy, K Mahata, A Samant and A Shrivastava 209–213
- The automatic liquid nitrogen filling system for GDA detectors
Rakesh Kumar, A J Malyadri, S Muralithar, Ruby Shanti, S K Saini, Kusum Rani, B P Ajith Kumar, Rajesh Kumar and R K Bhowmik 215–218
- Fabrication and testing of the recoil mass spectrometer at Bombay Pelletron
S Nagaraj, H C Jain, P K Joshi, S D Paul, R Palit, H V Panchal, B S Naidu, A Chatterjee and A Navin 219–222
- Inclusion of temperature dependent shell corrections in Landau theory for hot rotating nuclei
G Shanmugam and P Arumugam 223–227
- Single photons, dileptons, and hadrons from relativistic heavy ion collisions and quark-hadron phase transition
Dinesh Kumar Srivastava 235–249
- A new slant on hadron structure
W Detmold, D B Leinweber, W Melnitchouk, A W Thomas and S V Wright 251–261
- An empirical approach to the theory of particle and nuclear phenomena: Review and some new ideas
Raja Ramanna and Sudhir R Jain 263–269
- Searching for quark matter with dileptons and photons: From SPS to relativistic heavy ion collider
Itzhak Tserruya 271–283
- WA-98 Collaboration: Multiplicity distributions and charged-neutral fluctuations
Tapan K Nayak et al 285–300
- Multifragmentation and the phase transition: A systematic study of the multifragmentation of 1 A GeV Au, La, and Kr
B K Srivastava 301–313

Neutrino anomaly and ν -nucleus interactions	<i>S K Singh</i>	315–324
Quark matter formation in dense stellar objects	<i>S C Phatak</i>	325–336
Chiral symmetry and nuclear matter equation of state	<i>A B Santra</i>	337–344
Heavy ions at the LHC: Physics perspectives and experimental program	<i>J Schukraft</i>	345–354
PHENIX Collaboration: First result from RHIC-PHENIX	<i>Tarun Kanti Ghosh et al</i>	355–369
Nuclear responses for neutrinos and neutrino studies by double beta decays and inverse beta decays	<i>H Ejiri</i>	371–377
Nuclear and hadronic reaction mechanisms producing spin asymmetry	<i>Ken-ichi Kubo</i>	379–387
Hyperon production in pp collisions	<i>N G Kelkar and B K Jain</i>	389–397
GEM Collaboration: Meson production in $p + d$ reactions	<i>H Machner et al</i>	399–416
Chiral unitary theory: Application to nuclear problems	<i>E Oset, D Cabrera, H C Chiang, C Garcia Recio, S Hirenzaki, S S Kamalov, J Nieves, Y Okumura, A Ramos, H Toki and M J Vicente Vacas</i>	417–431
Exclusive hadronic processes and color transparency	<i>Pankaj Jain and John P Ralston</i>	433–444
Parametrization of nuclear parton distributions	<i>M Hirai, S Kumano and M Miyama</i>	445–457
Nuclear structure at high excitation energies	<i>A Ansari</i>	459–467
Open problems in formation and decay of composite systems in heavy ion reactions	<i>G Viesti, V Rizzi, M Barbui, D Fabris, M Lunardon, G Nebbia, S Moretto, S Pesente, M Cinausero, E Fioretto, G Prete and D Shetty</i>	469–479
Superheavy nuclei – cold synthesis and structure	<i>Raj K Gupta</i>	481–492
Proton scattering from unstable nuclei	<i>Y Blumenfeld, E Khan, F Maréchal and T Suomijärvi</i>	493–504
E1 resonances in neutron-rich nuclei within the phonon damping model	<i>Nguyen Dinh Dang, Vuong Kim Au, Toshio Suzuki and Akito Arima</i>	505–518
Physics with loosely bound nuclei	<i>Chhanda Samanta</i>	519–524
Recent radioactive ion beam program at RIKEN and related topics	<i>Akira Ozawa</i>	525–533

- Structure of light neutron-rich nuclei through Coulomb dissociation
*U Datta Pramanik, T Aumann, D Cortina, H Emling, H Geissel,
M Hellström, R Holzmann, N Iwasa, Y Leifels, G Münzenberg,
M Rejmund, C Scheidenberger, K Sümmerer, A Leistenschneider,
Th W Elze, A Grünschloss, S Ilievski, K Boretzky, J V Kratz,
R Kulesa, E Lubkiewicz, E Wajda, W Walus, P Reiter and H Simon* 535–544
- Success and limits of the relativistic mean field description of nuclear prop-
erties *Y K Gambhir* 545–556
- Compression modes and the nuclear matter incompressibility coefficient
Shalom Shlomo 557–570
- Quantum chaos, thermalization and dissipation in nuclear systems
Sudhir R Jain 571–584
- Recent studies in heavy ion induced fission reactions *R K Choudhury* 585–600
- Peculiarities of the modern neutron spectrometry *Yu P Popov* 601–610
- Magnetic rotation and chiral symmetry breaking
Ashok Kumar Jain and Amita 611–622
- The project SPES at LNL: Accelerator challenges *A Facco* 623–637
- Folded tandem ion accelerator facility at Trombay *P Singh* 639–650
- Superconducting LINAC booster for the Mumbai pelletron *B Srinivasan,
S K Singh, R G Pillay, M B Kurup and M K Pandey* 651–658
- Superconducting linac and associated accelerator development at NSC
Amit Roy 659–663
- Summary of ISNP2K *H Ejiri* 665–670
- Investigation of halo structure of ${}^6\text{He}$ by hyperspherical three-body method
Md Abdul Khan and Tapan Kumar Das 701–716
- A simple coordinate space approach to three-body problems – Examples:
Halo nucleus and double- λ hypernucleus *S Mahapatra, J Nag,
D P Sural and S N Mukherjee* 717–726
- Scattering and absorption differential cross sections for double photon
Compton scattering *B S Sandhu, M B Saddi, B Singh and B S Ghumman* 733–741
- Optics**
- Polarization modulational instability in a birefringent optical fiber with
fourth order dispersion *R Ganapathy and V C Kuriakose* 743–754

Introduction to solitons	<i>Miki Wadati</i>	841–847
Optical fiber communication – An overview	<i>M Arumugam</i>	849–869
Fundamentals of nonlinear optical materials	<i>D Arivuoli</i>	871–883
Shape changing collisions of optical solitons, universal logic gates and partially coherent solitons in coupled nonlinear Schrödinger equations	<i>M Lakshmanan and T Kanna</i>	885–916
A variational approach to nonlinear evolution equations in optics	<i>D Anderson, M Lisak and A Berntson</i>	917–936
Periodic wavetrains for systems of coupled nonlinear Schrödinger equations	<i>Kwok W Chow and Derek W C Lai</i>	937–952
Completely integrable models of nonlinear optics	<i>Andrey I Maimistov</i>	953–968
Bistable soliton states and switching in doubly inhomogeneously doped fiber couplers	<i>Ajit Kumar</i>	969–980
Stable complex solitary waves of Sasa Satsuma equation	<i>Sasanka Ghosh</i>	981–986
Nonlinear compression of optical solitons	<i>M N Vinoj and V C Kuriakose</i>	987–1001
Soliton models in resonant and nonresonant optical fibers	<i>K Porsezian</i>	1003–1039
Spinning solitons in cubic-quintic nonlinear media	<i>Lucian-Cornel Crasovan, Boris A Malomed and Dumitru Mihalache</i>	1041–1059
Stable helical solitons in optical media	<i>Boris A Malomed, G D Peng, P L Chu, Isaac Towers, Alexander V Buryak and Rowland A Sammut</i>	1061–1078
Self-trapped optical beams: Spatial solitons	<i>Andrey A Sukhorukov and Yuri S Kivshar</i>	1079–1095
Soliton-based ultra-high-speed optical communications	<i>Akira Hasegawa</i>	1097–1127
Spatiotemporal solitons in quadratic nonlinear media	<i>Frank W Wise</i>	1129–1138
Spatial solitons in nonlinear liquid waveguides	<i>R Barillé and G Rivoire</i>	1139–1161
Plasma Physics		
Neutrino beam plasma instability	<i>Vishnu M Bannur</i>	755–761
Condensed Matter Physics		
Magnetization curves for general cylindrical samples in a transverse field	<i>K V Bhagwat and Debjani Karmakar</i>	763–774

- Dielectric relaxation phenomena of rigid polar liquid molecules under gigahertz electric field *K Dutta, S K Sit and S Acharyya* 775–793
- Theory of anisotropic diamagnetism, local moment magnetization and carrier spin-polarization in $\text{Pb}_{1-x}\text{Eu}_x\text{Te}$ *R C Patnaik, R K Das, R L Hota and G S Tripathi* 795–808
- Near surface composition of some alloys by X-ray photoelectron spectroscopy *M Sreemany and T B Ghosh* 809–820
- Brief Reports**
- Masses of S and P wave mesons and pseudoscalar decay constants using a confinement scheme *J N Pandya and P C Vinodkumar* 821–827
- Lattice variation and thermal parameters of gel grown KDP crystals added with some ammonium compounds *T H Freeda and C Mahadevan* 829–836
