

Indexes to Volume 62

SUBJECT INDEX

Rapid Communication

- A time-dependent Fourier grid Hamiltonian-based formulation of time-dependent multi-configuration Hartree method
Kaushik Maji and S P Bhattacharyya L983–L991

Mathematical Physics

- Painlevé analysis and integrability of two-coupled non-linear oscillators
S Rajasekar 1–12
- Exact periodic wave solutions to the coupled Schrödinger–KdV equation and DS equations
Yan-ze Peng 933–941
- Local identities involving Jacobi elliptic functions
Avinash Khare, Arul Lakshminarayan and Uday Sukhatme 1201–1229

Quantum Mechanics

- Coherent states of general time-dependent harmonic oscillator
Jeong Ryeol Choi 13–29
- On the Bohmian quantum friction
Fatimah Shojai and Ali Shojai 803–814
- Differential realizations of the two-mode bosonic and fermionic Hamiltonians: A unified approach
Hayriye Tütüncüler and Ramazan Koç 993–1005

General Relativity and Gravitation

- Conformally flat tilted Bianchi Type-V cosmological models in general relativity
Raj Bali and B L Meena 1007–1014
- The CWKB approach to non-reflecting potential and cosmological implications
S Biswas and I Chowdhury 1231–1239

Statistical Physics

- Soliton dynamics in a modified Yakushevich model
P C Dash and M Panigrahi 815–826

Brownian motion in a classical ideal gas: A microscopic approach to Langevin's equation	<i>Rangan Lahiri, Arvind and Anirban Sain</i>	1015–1028
Particle Physics		
Precision tests of the standard model, the Higgs, and new physics	<i>Guido Altarelli</i>	149–161
Physics with large extra dimensions	<i>Ignatios Antoniadis</i>	163–176
Higgs physics at LHC	<i>S Dasu</i>	177–190
Higgs physics at future colliders: Recent theoretical developments	<i>Abdelhak Djouadi</i>	191–206
GUT precursors and fixed points in higher-dimensional theories	<i>Keith R Dienes, Emilian Dudas and Tony Gherghetta</i>	219–228
New neutrino experiments	<i>Maury Goodman</i>	229–240
Solar neutrino oscillation phenomenology	<i>Srubabati Goswami</i>	241–253
P and CP violation in B physics	<i>Michael Gronau</i>	255–267
Leptonic flavor and CP violation	<i>Yuval Grossman</i>	269–281
Higgs bosons in the standard model, the MSSM and beyond	<i>John F Gunion</i>	283–305
Understanding neutrino masses and mixings	<i>R N Mohapatra</i>	319–333
Leptogenesis	<i>E A Paschos</i>	359–367
Electroweak breaking and supersymmetry breaking	<i>Stefan Pokorski</i>	369–374
Transplanckian collisions in TeV scale gravity	<i>Riccardo Rattazzi</i>	375–387
Tachyon dynamics in string theory	<i>Ashoke Sen</i>	403–413
Lattice matrix elements and CP violation in B and K physics: Status and outlook	<i>Amarjit Soni</i>	415–437
Unraveling supersymmetry at future colliders	<i>Xerxes Tata</i>	439–450
Supersymmetry breaking with extra dimensions	<i>Fabio Zwirner</i>	497–511
Links between neutrino oscillations, leptogenesis, and proton decay within supersymmetric grand unification	<i>Jogesh C Pati</i>	513–522
Phenomenology of the minimal $SO(10)$ SUSY model	<i>Stuart Raby</i>	523–536

Supersymmetry at DØ and other new phenomena searches in Run II	<i>Auguste Besson</i>	537–540
Search for supersymmetry at LEP-2	<i>Ehud Duchovni</i>	541–544
LEP Higgs boson searches beyond the standard model and minimum supersymmetric standard model	<i>Pauline Gagnon</i>	545–550
Searches for physics beyond the standard model in $f\bar{f}$ production at LEP II	<i>Peter John Holt</i>	551–554
Neutral Higgs bosons in the standard model and in the minimal supersymmetric model: Searches at LEP	<i>P Igo-Kemenes</i>	555–560
Search for narrow-width $t\bar{t}$ resonances in $p\bar{p}$ collisions at $\sqrt{s} = 1.8$ TeV	<i>Supriya Jain</i>	561–563
Prospects for Higgs search at DØ	<i>Scott S Snyder</i>	565–568
Progress toward measuring the unitarity angle γ	<i>S Bailey</i>	569–572
Rare kaon decays: $K^+ \rightarrow \pi^+\nu\bar{\nu}$ and future	<i>Bipul Bhuyan</i>	573–578
NA48 results on neutral kaon and hyperon rare decays	<i>Nicolò Cartiglia</i>	579–581
Studies of radiative penguin B decays at BaBar	<i>John M LoSecco</i>	583–586
Status of V_{ub} measurement with BELLE detector	<i>Gobinda Majumder</i>	587–590
CP-violating asymmetries in $\eta'K$ and direct CP violation searches with BABAR in charmless hadronic B meson decays	<i>F Palombo</i>	591–596
Radiative widths of neutral kaon excitations	<i>Sunil V Somalwar</i>	597–599
Direct CP violation in neutral kaon decays	<i>Wojciech Wiślicki</i>	601–606
Search of extra space dimensions with ATLAS	<i>Ambreesh Gupta</i>	607–610
MiniBooNE overview and status	<i>P Kasper</i>	611–614
Charmonium spectroscopy – A review	<i>Kamal K Seth</i>	615–622
Fluctuations as a signal of quark-gluon plasma: Present experimental results	<i>Tapan K Nayak</i>	623–625
Latest results on J/ψ anomalous suppression	<i>Sérgio Ramos</i>	627–630
Neutrinoless double beta decay with small and hierarchical neutrino mass	<i>Biswajoy Brahmachari</i>	631–633

- Inconsistencies in interpreting the atmospheric neutrino anomaly
John M LoSecco 635–638
- T invariance of Higgs interactions in the standard model
P Mitra 639–642
- Bi-large neutrino mixings by radiative magnification
R N Mohapatra, M K Parida and G Rajasekaran 643–646
- Radiative stability of neutrino-mass textures
M K Parida, C R Das and G Rajasekaran 647–650
- Explaining Tevatron leptons photons missing- E_T events with supersym- metry
B C Allanach 651–653
- Required experimental accuracy to select between supersymmetrical models
David Grellscheid 655–658
- Study of \tilde{t} and \tilde{b} at LHC
Mihoko M Nojiri 659–662
- Constraints on sparticle spectrum in different supersymmetry breaking models
Katri Huitu, Jari Laamanen and P N Pandita 663–666
- Muon $g-2$ measurements and non-commutative geometry of quantum beams
Y Srivastava and A Widom 667–670
- MSSM charged Higgs production in the 1 TeV domain and large $\tan \beta$ determination
M Beccaria, F M Renard, S Trimarchi and C Verzegnassi 671–674
- On de-globalization in quantum chromodynamics
Mrinal Dasgupta 675–678
- Pseudoscalar-photon mixing and the large scale alignment of QSO optical polarizations
Pankaj Jain, Sukanta Panda and S Sarala 679–682
- Higgs production at next-to-next-to-leading order
V Ravindran, J Smith and W L van Neerven 683–686
- Possibility of extracting the weak phase γ from $\Lambda_b \rightarrow \Lambda D^0$ decays
A K Giri, R Mohanta and M P Khanna 687–690
- Near-horizon states of black holes and Calogero models
B Basu-Mallick, Pijush K Ghosh and Kumar S Gupta 691–694
- D -branes in pp -wave background
Alok Kumar, Rashmi R Nayak and Sanjay 695–698

Logarithmic corrections to entropy and AdS/CFT	<i>Shesansu Sekhar Pal</i>	699–702
Intersecting $p - p'$ branes in pp -wave background	<i>Anindya Biswas, Alok Kumar and Kamal L Panigrahi</i>	703–706
Black holes in brane worlds	<i>M S Modgil, S Panda and G Sengupta</i>	707–710
Orientifolds of type IIA strings on Calabi–Yau manifolds	<i>Suresh Govindarajan and Jaydeep Majumder</i>	711–715
The gravity dual of the non-perturbative $N = 2$ supersymmetric Yang–Mills theory	<i>Satchidananda Naik</i>	717–720
$N = 1$ super quantum chromodynamics and fractional branes	<i>Franco Pezzella</i>	721–724
Cancellation of global anomalies in spontaneously broken gauge theories	<i>Marco Fabbrichesi</i>	725–727
Gauge coupling renormalization in AdS ₅	<i>Ian-Woo Kim</i>	729–731
Realistic split fermion models	<i>Yuval Grossman and Gilad Perez</i>	733–736
Bounds on charged lepton mixing with exotic charged leptons	<i>Jai Kumar Singhal</i>	1029–1040
Neutrino propagation in a weakly magnetized medium	<i>Sushan Konar and Subinoy Das</i>	1241–1254
Nuclear Physics		
High density matter at RHIC	<i>Thomas S Ullrich</i>	465–481
Shape change in Hf, W and Os-isotopes: A non-relativistic Hartree–Fock versus relativistic Hartree approximation	<i>Z Naik, B K Sharma, T K Jha, P Arumugam and S K Patra</i>	827–839
Potential energy surfaces for $N = Z$, ^{20}Ne – ^{112}Ba nuclei	<i>M S Mehta, T K Jha, S K Patra and Raj K Gupta</i>	841–859
Effect of environmental conditions on radon concentration–track density calibration factor of solid-state nuclear track detectors	<i>A El-Sersy, M Mansy and A Hussein</i>	861–867
Cluster radioactivity in xenon isotopes	<i>K P Santhosh and Antony Joseph</i>	957–965
Inverse beta decay of arbitrarily polarized neutrons in a magnetic field	<i>Kaushik Bhattacharya and Palash B Pal</i>	1041–1058

- α -Particle induced reactions on rhodium *M S Gadkari
and N L Singh* 1059–1072

Atomic and Molecular Physics

- Atom in a femtosecond bichromatic laser field *K Batra,
R Kundliya and Man Mohan* 31–36
- Statistical fluid theory for associating fluids containing alternating heteronuclear chain molecules *Dinesh Kumar Singh and
K N Khanna* 869–881
- Selective excitation of vibrational modes of polyatomic molecule *N Singhal, V Prasad and M Mohan* 883–891
- Einstein *A*-coefficients for rotational transitions in the ring-chain isomer of C_5H_2 *Suresh Chandra and S A Shinde* 967–971
- Triple differential cross-sections for near threshold ($e, 2e$) process for hydrogen *M K Srivastava and R K Chauhan* 1073–1082
- Molar extinction coefficients of solutions of some organic compounds *Kulwant Singh, G K Sandhu and B S Lark* 1139–1145
- Electron dichroism effects in the relativistic ($e, 2e$) process for K-shell ionization of atoms *K K Sud, G Purohit and A S Bhullar* 1157–1166
- Simultaneous K plus L shell ionized atoms during heavy-ion collision process *G A V Ramana Murty, G J Naga Raju, V Vijayan,
T Ranjan Rautray, B Seetharami Reddy, S Lakshminarayana,
K L Narasimham and S Bhuloka Reddy* 1303–1307

Lasers, Optics and Spectroscopy

- Non-linear polarization and chiral effects in birefringent solitons *H Torres-Silva and M Zamorano Lucero* 37–52
- Gain clamping in double-pass L-band EDFA using a broadband FBG *Sulaiman Wadi Harun and Harith Ahmad* 893–897
- Impulse coupling in laser-driven microtargets *P Bhargava,
M Kumar, H Kumar, P Pandit, R Pandey and A K Nath* 923–932
- Real solution of monochromatic wave propagation in inhomogeneous media *Cs Ferencz* 943–955
- Normal modes and quality factors of spherical dielectric resonators:
I – Shielded dielectric sphere *R A Yadav and I D Singh* 1255–1271

On the dual symmetry between absorbing and amplifying random media
S Anantha Ramakrishna 1273–1279

Fluid Dynamics

Thermorheological effect on magnetoconvection in weak electrically conducting fluids under 1g or μg *P G Siddheshwar* 61–68

Note on the surface wave due to the prescribed elevation
Niranjan Das 135–142

Plasma Physics

Optimization and performance of a high-speed plasma position digital control system
M Emami, A R Babazadeh and H Rasouli 53–60

Anti-screening in magnetically quantized plasmas
B Shokri and S M Khorashadi 69–76

Kelvin–Helmholtz instability in a rotating ideally conducting inhomogeneous plasma
Vinod Kumar, K M Srivastava, Nagendra Kumar and Himanshu Sikka 899–909

Surface morphology changes of poly(ethyleneterephthalate) fabrics induced by cold plasma treatments
G Poletti, F Orsini, A Raffaele-Addamo, C Riccardi and E Selli 911–921

Current drive for rotamak plasmas
Robin Storer and Gunhild von Oertzen 1083–1089

Sheath characteristics in multi-component plasma with negative ions
H Bailung, D Boruah, A R Pal and Joyanti Chutia 1091–1098

Effect of dichlorodimethylsilane on plasma-treated cotton fabric
C J Jahagirdar and L B Tiwari 1099–1109

Condensed Matter Physics

Single crystal EPR studies of Mn(II) doped into zinc ammonium phosphate hexahydrate ($\text{ZnNH}_4\text{PO}_4 \cdot 6\text{H}_2\text{O}$): A case of interstitial site for bio-mineral analogue
H Anandalakshmi, K Velavan, I Sougandi, R Venkatesan and P Sambasiva Rao 77–86

Ultrasonic measurement of the elastic properties of benzoyl glycine single crystals
A V Alex and J Philip 87–94

Melting temperature of H_2 , D_2 , N_2 and CH_4 under high pressure
Kamal Kapoor, Narsingh Dass and Rajendra Kumar 95–100

- $U(1)$ Gauge theory as quantum hydrodynamics *Girish S Setlur* 101–114
- Sea-boson theory of Landau–Fermi liquids, Luttinger liquids and Wigner crystals *Girish S Setlur* 115–134
- Dielectric relaxation studies of aqueous sucrose in ethanol mixtures using time domain reflectometry *C G Akode, K S Kanse, M P Lokhande, A C Kumbharkhane and S C Mehrotra* 973–981
- Recombination instability and domainisation in p -Ge(Au) *I K Kamilov, Kh O Ibragimov, K M Aliev and N S Abakarova* 1111–1119
- Nucleation of domains under the influence of temperature in $\text{Ba}_5\text{Ti}_2\text{O}_7\text{Cl}_4$ *S G Ingle and N M Patil* 1121–1128
- Fluid structure and molecular interaction of acetophenone derivatives *K K Gupta and P J Singh* 1129–1137
- Ultrasonic and infrared study of molecular interactions in ternary mixtures of 1-naphthol and 2-naphthol with 2-propanone in benzene *Isht Vibhu, Amit Misra, Manisha Gupta and J P Shukla* 1147–1155
- Energy levels in rectangular quantum well wires based on a modified profile of the heterojunction *E Sadeghi* 1167–1172
- Far-infrared spectral studies of magnesium and aluminum co-substituted lithium ferrites *K B Modi, J D Gajera, M P Pandya, H G Vora and H H Joshi* 1173–1180
- Dislocation unpinning model of acoustic emission from alkali halide crystals *B P Chandra, Anubha S Gour, Vivek K Chandra and Yuvraj Patil* 1281–1292
- Interface defects in GaN/sapphire studied using Rutherford backscattering spectroscopy and channeling *S K Sinha and P K Barhai* 1293–1298
- High-temperature thermoelectric behavior of lead telluride *M P Singh and C M Bhandari* 1309–1317
- On diffusion-controlled interface microstructure of vapor deposited bilayer thin film of Sn/Cu *T B Ghosh and Sampa Dhabal* 1319–1325

Geophysics

- Radon exhalation studies in building materials using solid-state nuclear track detectors *Ajay Kumar and Surinder Singh* 143–146

Cosmology

- Particle physics explanations for ultra-high energy cosmic ray events
Manuel Drees 207–218
- Inflation, large scale structure and particle physics *S F King* 307–318
- SUSY dark matter – a collider physicist’s perspective
Mihoko M Nojiri 335–346
- Experimental and phenomenological status of neutrino anomalies
Sandip Pakvasa 347–358
- Particle dark matter – A theorist’s perspective
Leszek Roszkowski 389–401
- Baryogenesis and the new cosmology *Mark Trodden* 451–463
- High-energy cosmic rays: Puzzles, models, and giga-ton neutrino telescopes
E Waxman 483–495
- Primordial braneworld black holes: Significant enhancement of lifetimes through accretion
A S Majumdar 737–739
- A five-dimensional model of varying fine structure constant
J P Mbelek 741–743
- Scalar field dynamics on a brane
A V Toporensky
and N Yu Savchenko 745–748
- Mimicking trans-Planckian effects in the CMB with conventional physics
J M Cline 749–752
- Hybrid stars *Ashok Goyal* 753–756
- Tachyon field in cosmology *H K Jassal* 757–760
- Baryogenesis via density fluctuations with a second-order electroweak phase transition
Biswanath Layek, Soma Sanyal
and Ajit M Srivastava 761–764
- Cosmology with rolling tachyon
M Sami,
Pravabati Chingangbam and Tabish Qureshi 765–770
- Leptogenesis with left–right domain walls
U A Yajnik, J Cline
and M Rabikumar 771–773

- Neutrino–antineutrino asymmetry around rotating black holes
Banibrata Mukhopadhyay and Parampreet Singh 775–778
- Late time phase transition as dark energy *A de la Macorra* 779–783
- Neutrino–nucleon cross-section at ultra-high energies in models
 with large extra dimensions *Sukanta Panda* 785–787
- Ultra-high energy cosmic rays and prompt TeV gamma rays from
 gamma ray bursts *Pijushpani Bhattacharjee*
and Nayantara Gupta 789–792
- Statistical isotropy of the cosmic microwave background
Tarun Souradeep and Amir Hajian 793–796
- Anisotropic Lyra cosmology *B B Bhowmik and A Rajput* 1187–1199
- Nature of the emission band of Dergaon meteorite in the region
 5700–6700 Å *S Bhattacharyya, A Gohain Barua, R Konwar,*
R Changmai and G D Baruah 1299–1301
- Comments**
- Comment on: “Universal relation between spectroscopic con-
 stants” *Suresh Chandra* C1181–C1185
- Response to the comment on: “Universal relation between spec-
 troscopic constants” *Sarvpreet Kaur*
and C G Mahajan C1186
