

# Indexes to Volume 64

## SUBJECT INDEX

### Mathematical Physics

- Exact periodic wave solutions to the generalized Nizhnik–Novikov–Veselov equation *Yan-ze Peng* 159–169

### Quantum Mechanics

- Failure of Kak quantum key distribution protocol *Ching-Nung Yang, Su-Hsuan Chu and Bing-Ling Lu* 1–4
- The Pondicherry interpretation of quantum mechanics: An overview *U Mohrhoff* 171–185

### General Relativity and Cosmology

- A relativistic core–envelope model on pseudospheroidal space-time *Ramesh Tikekar and V O Thomas* 5–15
- Mean square number fluctuation for a fermion source and its dependence on neutrino mass for the universal cosmic neutrino background *Swapnil S Jawkar and Sudhanshu S Jha* 17–29
- Bianchi Type-IX viscous fluid cosmological model in general relativity *Raj Bali and Mahesh Kumar Yadav* 187–196

### Solar Physics

- Unusually low-amplitude anisotropic wave-train events of cosmic ray intensity during 1981–1994 *Rajesh K Mishra and Rekha Agarwal Mishra* 197–206

### Space Physics

- Full-wave solution of short impulses in inhomogeneous plasma *Orsolya E Ferencz* 249–268

### Statistical Physics

- Boltzmann and Einstein: Statistics and dynamics – An unsolved problem *E G D Cohen* 635–643
- Correlated randomness: Some examples of exotic statistical physics *H Eugene Stanley* 645–660
- Sheared solid materials *Akira Onuki, Akira Furukawa and Akihiko Minami* 661–677
- Theoretical approaches to the glass transition in simple liquids *Chandan Dasgupta* 679–694
- Fluctuations and large deviations in non-equilibrium systems *B Derrida* 695–707

Phase transitions, interfacial fluctuations and hidden symmetries for fluids near structured walls	<i>A O Parry and J M Romero-Enrique</i>	709–725
Phenomenological dynamics: From Navier–Stokes to chiral granular gases	<i>T C Lubensky</i>	727–742
Critical Casimir forces and anomalous wetting	<i>S Balibar and R Ishiguro</i>	743–755
Some mathematical aspects of the scaling limit of critical two-dimensional systems	<i>Wendelin Werner</i>	757–773
New results for virial coefficients of hard spheres in $D$ dimensions	<i>Nathan Clisby and Barry M McCoy</i>	775–783
Classical charged fluids at equilibrium near an interface: Exact analytical density profiles and surface tension	<i>Françoise Cornu</i>	785–801
Bulk and boundary critical behaviour at Lifshitz points	<i>H W Diehl</i>	803–816
Why one needs a functional renormalization group to survive in a disordered world	<i>Kay Jörg Wiese</i>	817–827
The analytic structure of lattice models – Why can't we solve most models?	<i>Anthony J Guttmann</i>	829–846
Kardar–Parisi–Zhang equation in one dimension and line ensembles	<i>Herbert Spohn</i>	847–857
Factorised steady states and condensation transitions in nonequilibrium systems	<i>M R Evans</i>	859–869
Nonequilibrium relaxation method – An alternative simulation strategy	<i>Nobuyasu Ito</i>	871–880
Wetting and phase separation at surfaces	<i>Sanjay Puri and Kurt Binder</i>	881–892
Structure and cluster formation in granular media	<i>S Luding</i>	893–902
Control and characterization of spatio-temporal disorder in parametrically excited surface waves	<i>T Epstein and J Fineberg</i>	903–913
Non-stationary probabilities for the asymmetric exclusion process on a ring	<i>V B Priezzhev</i>	915–925
Pattern formations in chaotic spatio-temporal systems	<i>Ying Zhang, Shihong Wang, Jinhua Xiao, Hilda A Cerdeira, S Chen and Gang Hu</i>	927–937
Does the flatness of the velocity derivative blow up at a finite Reynolds number?	<i>K R Sreenivasan and A Bershadskii</i>	939–945
Intermittency at critical transitions and aging dynamics at the onset of chaos	<i>A Robledo</i>	947–956
Where do ions solvate?	<i>Yan Levin</i>	957–961
Jamming patterns in a two-dimensional hopper	<i>Kiwing To</i>	963–969
The depletion potential in one, two and three dimensions	<i>R Roth and P-M König</i>	971–980

Polymer mixtures in confined geometries: Model systems to explore phase transitions	<i>K Binder, M Müller, A Cavallo and E V Albano</i>	981–989
Colloidal interactions in two-dimensional nematic emulsions	<i>N M Silvestre, P Patrício and M M Telo Da Gama</i>	991–1000
Local simulation algorithms for Coulombic interactions	<i>L Levrel, F Alet, J Rottler and A C Maggs</i>	1001–1010
Knots in polymers	<i>Yacov Kantor</i>	1011–1017
Droplet dynamics on patterned substrates	<i>A Dupuis and J M Yeomans</i>	1019–1027
Fluctuation-induced forces in and out of equilibrium	<i>Ramin Golestanian</i>	1029–1038
Keldysh proximity action for disordered superconductors	<i>M V Feigel'man, A I Larkin and M A Skvortsov</i>	1039–1049
Effect of interactions, disorder and magnetic field in the Hubbard model in two dimensions	<i>N Trivedi, P J H Denteneer, D Heidarian and R T Scalettar</i>	1051–1061
A new theory of doped manganites exhibiting colossal magnetoresistance	<i>H R Krishnamurthy</i>	1063–1074
A sigma-model approach to glassy dynamics	<i>Claudio Chamon and Leticia F Cugliandolo</i>	1075–1085
Some recent developments in spin glasses	<i>A P Young</i>	1087–1096
Models of plastic depinning of driven disordered systems	<i>M Cristina Marchetti</i>	1097–1107
Aging, rejuvenation and memory phenomena in spin glasses	<i>V Dupuis, F Bert, J-P Bouchaud, J Hamman, F Ladieu, D Parker and E Vincent</i>	1109–1119
Measuring information networks	<i>K Sneppen, A Trusina and M Rosvall</i>	1121–1125
Fusion of biological membranes	<i>K Katsov, M Müller and M Schick</i>	1127–1134
Single-molecule experiments in biophysics: Exploring the thermal behavior of nonequilibrium small systems	<i>F Ritort</i>	1135–1147
Scale-free random graphs and Potts model	<i>D-S Lee, K-I Goh, B Kahng and D Kim</i>	1149–1159
Statistical physics, optimization and source coding	<i>Riccardo Zecchina</i>	1161–1173
Understanding search trees via statistical physics	<i>Satya N Majumdar, David S Dean and P L Krapivsky</i>	1175–1189
<b>Nuclear Physics</b>		
Nuclear matter equation of state and $\sigma$ -meson parameters	<i>A B Santra and U Lombardo</i>	31–37

- Cluster emission in superdeformed Sr isotopes in the ground state and formed in heavy-ion reaction *K P Santhosh and Antony Joseph* 39–46
- Adiabatic heavy-ion fusion potentials for fusion at deep sub-barrier energies *S V S Sastry, S Kailas, A K Mohanty and A Saxena* 47–53
- Exploring effective interactions through transition charge density study of  $^{70,72,74,76}\text{Ge}$  nuclei *A Shukla, P K Raina and P K Rath* 207–220
- Angular momentum transfer in incomplete fusion *B S Tomar, K Surendra Babu, K Sudarshan, R Tripathi and A Goswami* 221–227
- Atomic and Molecular Physics**
- Scaling of triple differential cross-sections for asymmetric ( $e, 2e$ ) process on helium isoelectronic ions by fast electrons *M K Srivastava* 55–66
- Collisional excitation of neon-like Ni XIX using the Breit–Pauli  $R$ -matrix method *Narendra Singh and Man Mohan* 129–134
- Lasers and Optics**
- Singly-resonant optical parametric oscillator based on KTA crystal *S Das, S Gangopadhyay, C Ghosh and G C Bhar* 67–74
- Time-gated optical imaging through turbid media using stimulated Raman scattering: Studies on image contrast *K Divakar Rao, H S Patel, B Jain and P K Gupta* 229–238
- A new approach of binary addition and subtraction by non-linear material based switching technique *Archan Kumar Das, Partha Pratima Das and Sourangshu Mukhopadhyay* 239–247
- Fluid Dynamics**
- Bifurcation and chaos in simple jerk dynamical systems *Vinod Patidar and K K Sud* 75–93
- Nonlinear Dynamics**
- A perspective on nonlinear dynamics *Neelima Gupte, Ramakrishna Ramaswamy and Rajarshi Roy* 307–313
- Logarithmic scaling in the near-dissipation range of turbulence *K R Sreenivasan and A Bershadskii* 315–321
- Instabilities and transition in boundary layers *N Vinod and Rama Govindarajan* 323–332
- Incompressible turbulence as non-local field theory *Mahendra K Verma* 333–341
- On the dynamical mechanism of cross-over from chaotic to turbulent states *G Ananthakrishna* 343–352
- Statistical methods in nonlinear dynamics *K P N Murthy, R Harish and S V M Satyanarayana* 353–370
- Instantaneous frequencies of a chaotic system *C Chandré and T Uzer* 371–379

Local dimension and finite time prediction in coupled map lattices <i>P Muruganandam and G Francisco</i>	381–387
Fractal differential equations and fractal-time dynamical systems <i>Abhay Parvate and A D Gangal</i>	389–409
$q$ -Deformed nonlinear maps <i>Ramaswamy Jaganathan and Sudeshna Sinha</i>	411–421
The quasi-equilibrium phase of nonlinear chains <i>T R Krishna Mohan and Surajit Sen</i>	423–431
Construction of a reconfigurable dynamic logic cell <i>K Murali, Sudeshna Sinha and William L Ditto</i>	433–441
Homoclinic bifurcation in Chua's circuit <i>S K Dana, S Chakraborty and G Ananthakrishna</i>	443–454
Synchronization of coupled chaotic dynamics on networks <i>R E Amritkar and Sarika Jalan</i>	455–464
Collective dynamics of delay-coupled limit cycle oscillators <i>Abhijit Sen, Ramana Dodla and George L Johnston</i>	465–482
Complex networks: Dynamics and security <i>Ying-Cheng Lai, Adilson Motter, Takashi Nishikawa, Kwangho Park and Liang Zhao</i>	483–502
Intermittent lag synchronization in a driven system of coupled oscillators <i>Alexander N Pisarchik and Rider Jaimes-Reátegui</i>	503–511
Dynamical hysteresis and spatial synchronization in coupled non-identical chaotic oscillators <i>Awadhesh Prasad, Leon D Iasemidis, Shivkumar Sabesan and Kostas Tsakalis</i>	513–523
Coupled chaotic oscillators and their relation to a central pattern generator for artificial quadrupeds <i>Horacio Castellini, Efta Yudiarsah, Lilia Romanelli and Hilda A Cerdeira</i>	525–534
Aspects of stochastic resonance in Josephson junction, bimodal maps and coupled map lattice <i>G Ambika, Kamala Menon and K P Harikrishnan</i>	535–542
Observations and modeling of deterministic properties of human heart rate variability <i>J J Zebrowski and R Baranowski</i>	543–552
Death, dynamics and disorder: Terminating reentry in excitable media by dynamically-induced inhomogeneities <i>Johannes Breuer and Sitabhra Sinha</i>	553–562
Evolution of classical projected phase space density in billiards <i>Debabrata Biswas</i>	563–575
Entanglement production in quantized chaotic systems <i>Jayendra N Bandyopadhyay and Arul Lakshminarayan</i>	577–592
Stochasticity, decoherence and an arrow of time from the discretization of time? <i>M C Valsakumar</i>	593–606

- Space curves, anholonomy and nonlinearity *Radha Balakrishnan* 607–615
- Nonlinear dynamics: Challenges and perspectives *M Lakshmanan* 617–632
- Plasma Physics**
- Investigation of multipactor breakdown in communication satellite microwave co-axial systems *S K Nagesh, D Revannasiddiah and S V K Shastry* 95–110
- Effect of dielectronic recombination on the charge-state distribution and soft X-ray line intensity of laser-produced carbon plasma  
*A Chowdhury, G P Gupta, P A Naik and P D Gupta* 141–146
- Theoretical study of  $2 \times 2$  element planar array of equilateral triangular patch microstrip antenna in plasma medium *K K Verma and K R Soni* 147–152
- Condensed Matter Physics**
- Relaxation of femtosecond photoexcited electrons in a polar indirect band-gap semiconductor nanoparticle *Navinder Singh* 111–118
- Electronic and vibrational Raman spectroscopy of  $\text{Nd}_{0.5}\text{Sr}_{0.5}\text{MnO}_3$  through the phase transitions *Md Motin Seikh, A K Sood and Chandrabhas Narayana* 119–128
- Novel approach for prediction of ultrasonic velocity in quaternary liquid mixtures *J D Pandey, A K Singh and Ranjan Dey* 135–139
- Total energy, equation of state and bulk modulus of AlP, AlAs and AlSb semiconductors *A R Jivani, H J Trivedi, P N Gajjar and A R Jani* 153–158
- Structures and autocorrelation functions of liquid Al and Mg modelled via Lennard–Jones potential from molecular dynamics simulation  
*G A Adebayo, O Akinlade and L A Hussain* 269–279
- Phase changes in  $\text{Fe}_{72-x}\text{Al}_{28}\text{Cr}_x$  ( $x = 0, 2, 4, 6$ ) alloys due to mechanical strain *Brajesh Pandey and H C Verma* 281–290
- Lattice vibrational properties of transition metal carbides (TiC, ZrC and HfC) *K S Upadhyaya, Ajay Kumar Singh, Atul Pandey, S N Pathak and A K Singh* 299–304
- Chemical Physics**
- Liesegang patterns: Complex formation of precipitate in an electric field *István Lagzi* 291–298
