

Indexes to Volume 66

SUBJECT INDEX

Mathematical Physics

- The superposition method in seeking the solitary wave solutions to the KdV–Burgers equation *Yuanxi Xie and Jiashi Tang* 479–483
- Construction of exact dynamical invariants of two-dimensional classical system *S C Mishra and Fakir Chand* 601–607
- Painlevé test for integrability and exact solutions for the field equations for Charap’s chiral invariant model of the pion dynamics *Susanto Chakraborty and Pranab Krishna Chanda* 961–969
- On a revisit to the Painlevé test for integrability and exact solutions for Yang’s self-dual equations for $SU(2)$ gauge fields *Susanto Chakraborty and Pranab Krishna Chanda* 971–983

Quantum Mechanics

- Gentile statistics and restricted partitions *C S Srivatsan, M V N Murthy and R K Bhaduri* 485–494

General Relativity and Gravitation

- A new algorithm for anisotropic solutions *M Chaisi and S D Maharaj* 313–324
- Anisotropic static solutions in modelling highly compact bodies *M Chaisi and S D Maharaj* 609–614

Particle Physics

- The trace identity and the planar Casimir effect *S G Kamath* 325–344
- The energy–momentum tensor, the trace identity and the Casimir effect *S G Kamath* 345–360
- Discriminating neutrino mass models using Type-II see-saw formula *N Nimai Singh, Mahadev Patgiri and Mrinal Kumar Das* 361–375
- On diquark clustering in quark–gluon plasma *A K Sisodiya, V S Bhasin and R S Kaushal* 377–387

Nuclear Physics

- Microscopic study of low-lying collective bands in ^{77}Kr *K C Tripathy, R Sahu and S Mishra* 389–401
- Diffraction model analysis of pion- ^{12}C elastic scattering at 800 MeV/c: Optical potential by inversion *I Ahmad and M R Arafah* 495–505
- Structure and reactions of pentaquark baryons *Atsushi Hosaka* 625–645
- Pentaquarks in chiral color dielectric model *S C Phatak* 647–655
- Theoretical expectations for σ^{tot} at the large hadron collider *Rohini M Godbole, Agnes Grau, Rohit Hegde, Giulia Pancheri and Yogi Srivastava* 657–668

Some applications of thermal field theory to quark-gluon plasma	<i>Munshi G Mustafa</i>	669–687
Weak pion production from nuclei	<i>S K Singh, M Sajjad Athar and Shakeb Ahmad</i>	689–701
Proton electromagnetic form factors at large momentum transfer	<i>Pankaj Jain and Subhadip Mitra</i>	703–708
Hadrons in medium	<i>U Mosel</i>	709–729
Chiral dynamics of baryon resonances and hadrons in a nuclear medium	<i>E Oset, D Cabrera, V K Magas, L Roca, S Sarkar, M J Vicente Vacas and A Ramos</i>	731–752
Hadron production near threshold	<i>B K Jain, N G Kelkar and K P Khemchandani</i>	753–764
Strangeness production in proton–proton and proton–nucleus collisions	<i>Radhey Shyam</i>	765–780
Vector mesons in matter	<i>Gy Wolf</i>	781–790
Resonances in η -light nucleus systems	<i>K P Khemchandani, N G Kelkar, M Nowakowski and B K Jain</i>	791–796
Collective flows in high-energy heavy-ion collisions at AGS and SPS energies	<i>A Ohnishi, M Isse, N Otuka, P K Sahu and Y Nara</i>	797–807
Re-hardening of hadron transverse mass spectra in relativistic heavy-ion collisions	<i>P K Sahu, N Otuka, M Isse, Y Nara and A Ohnishi</i>	809–816
Hadrons in compact stars	<i>Debades Bandyopadhyay</i>	817–825
A new ‘hidden colour hypothesis’ in hadron physics	<i>Afsar Abbas</i>	827–832
In-medium properties of hadrons – Recent experimental results and perspectives	<i>Volker Metag</i>	833–856
QCD physics at hadron storage rings: From COSY to FAIR	<i>James Ritman</i>	857–866
Recent physics at COSY – A review	<i>H Machner</i>	867–876
Two-pion production in photon-induced reactions	<i>S Schadmand</i>	877–884
ENSTAR detector for η -mesic studies	<i>A Chatterjee, B J Roy, V Jha, P Shukla and H Machner</i>	885–892
Isospin symmetry violation, meson production and η -nucleus interaction studies	<i>B J Roy, V Jha, A Chatterjee and H Machner</i>	893–901
Tagged photon facility at Centre for Advanced Technology, Indore: Possible scenarios	<i>L M Pant</i>	903–914
Investigation of in-medium ω photoproduction	<i>David Trnka</i>	915–920
Investigations of $\eta \rightarrow \pi^0 \gamma \gamma$	<i>Ankhi Roy</i>	921–930
Nucleon resonance decay by the $K^0 \Sigma^+$ channel: Preliminary results	<i>S V Shende, R Castelijns, J C S Bacelar, H Löhner and J Messchendorp</i>	931–936

- Search for non-strange dibaryons *Arun K Jain* 937–942
- Study of η -nucleus interaction through the formation of η -nucleus bound state *V Jha, B J Roy, A Chatterjee and H Machner* 943–946
- $(\gamma, \pi^0\gamma)$ reaction on a nucleus in the GeV region *Swapna Das* 947–952
- Properties of B_c meson *Ajay Kumar Rai and P C Vinodkumar* 953–958
- Effect of entrance channel parameters on the fusion of two heavy ions: Excitation functions of reaction products in $^{16}\text{O} + ^{66}\text{Zn}$ and $^{37}\text{Cl} + ^{45}\text{Sc}$ reactions *Suparna Sodaye, B S Tomar and A Goswami* 985–997
- The isospin admixture of the ground state and the properties of the isobar analog resonances in medium and heavy mass nuclei *D I Salamov, T Babacan, A Küçükburşa, S Ünlü and İ Maraş* 1105–1110
- Atomic and Molecular Physics**
- Ionization and excitation of some atomic targets and metal oxides by electron impact *K N Joshipura, B G Vaishnav and C G Limbachiya* 403–414
- Coulomb–Born–Oppenheimer approximation in Ps–H scattering *Hasi Ray* 415–422
- Van der Waals coefficients for alkali metal clusters and their size dependence *Arup Banerjee and Manoj K Harbola* 423–433
- Polarizability effect in metallic clusters *Ş Şentürk, K Harigaya and O Özsoy* 507–512
- Determination of rotational temperature of AlO from the $\text{B}^2\Sigma^+ - \text{X}^2\Sigma^+$ system *M M Chaudhari, C T Londhe and S H Behere* 597–600
- Dependence of adiabatic population transfer on pulse profile *S Dasgupta, T Kushwaha and D Goswami* 999–1015
- Excited states of muonium in atomic hydrogen *V S Kulhar* 1017–1025
- High sensitivity probe absorption technique for time-of-flight measurements on cold atoms *A K Mohapatra and C S Unnikrishnan* 1027–1035
- Study of photon-induced L_3 vacancy alignment for elements La to U *Ajay Sharma, Meenu Singh and Raj Mittal* 1111–1117
- Electron impact single ionization of mono- and di-positive ions *M Alfaz Uddin, A K F Haque, M S Mahbub, K R Karim and A K Basak* 1119–1124
- On solving energy-dependent partitioned eigenvalue problem by genetic algorithm: The case of real symmetric Hamiltonian matrices *Rahul Sharma, Subhajit Nandy and S P Bhattacharyya* 1125–1130
- Lasers and Optics**
- Optical phase-conjugation in erioglaucine dye-doped thin film *T Geethakrishnan and P K Palanisamy* 473–478

- The overall phase shift and lens effect calculation using Gaussian boundary conditions and paraxial ray approximation for an end-pumped solid-state laser
H Nadgaran and P Elahi 513–519
- Photorefractive dynamic holography using self-pumped phase conjugate beam
Arun Anand and C S Narayanamurthy 521–537
- Gain-clamping techniques in two-stage double-pass L-band EDFA
S W Harun, N Md Samsuri and H Ahmad 539–545
- Unitary transformation method for solving generalized Jaynes–Cummings models
Sudha Singh 615–620
- Computation of the lateral and axial point spread functions in confocal imaging systems using binary amplitude mask
A M Hamed 1037–1048
- Acoustics**
- Excess isentropic compressibility and speed of sound of the ternary mixture 2-propanol + diethyl ether + n-hexane and the constituent binary mixtures at 298.15 K
Gokhan Savaroglu and Ertunc Aral 435–446
- Fluid Dynamics**
- Field-theoretic calculation of kinetic helicity flux
V Avinash, Mahendra K Verma and Amar V Chandra 447–453
- Plasma Physics**
- Plasma–maser instability of the ion acoustics wave in the presence of lower hybrid wave turbulence in inhomogeneous plasma
M Singh and P N Deka 547–561
- Ion-acoustic solitons in multispecies spatially inhomogeneous plasmas
Tarsem Singh Gill, Harvinder Kaur and Nareshpal Singh Saini 1049–1056
- Condensed Matter Physics**
- Vortices in Bose–Einstein condensates: A review of the experimental results
R Srinivasan 3–30
- Diffused vorticity approach to the oscillations of a rotating Bose–Einstein condensate confined in a harmonic plus quartic trap
M Cozzini 31–42
- Melting of heterogeneous vortex matter: The vortex ‘nanoliquid’
S S Banerjee, S Goldberg, Y Myasoedov, M Rappaport, E Zeldov, A Soibel, F de la Cruz, C J van der Beek, M Konczykowski, T Tamegai and V Vinokur 43–54
- Weak point disorder in strongly fluctuating flux-line liquids
Panayotis Benetatos and M Cristina Marchetti 55–65
- Vortices in superconducting bulk, films and SQUIDs
Ernst Helmut Brandt 67–81
- Why pinning by surface irregularities can explain the peak effect in transport properties and neutron diffraction results in NbSe₂ and Bi-2212 crystals?
Charles Simon, Alain Pautrat, Christophe Goupil, Joseph Scola, Patrice Mathieu, Annie Brûlet, Antoine Ruyter, M J Higgins, Shobo Bhattacharya and D Plessis 83–97

- Quantitative theory of thermal fluctuations and disorder in the vortex matter
Dingping Li, Baruch Rosenstein and P Lin 99–111
- Vortex phase diagram studies in the weakly pinned single crystals of $\text{YNi}_2\text{B}_2\text{C}$ and $\text{LuNi}_2\text{B}_2\text{C}$
D Jaiswal-Nagar, D Pal, M R Eskildsen, P C Canfield, H Takeya, S Ramakrishnan and A K Grover 113–129
- Magnetic phase diagram of Josephson vortices in $\text{Bi}_2\text{Sr}_2\text{CaCu}_2\text{O}_{2+y}$
K Hirata 131–139
- Effects of sample size on the second magnetization peak in $\text{Bi}_2\text{Sr}_2\text{CaCuO}_{8+\delta}$ at low temperatures
B Kalisky, A Shaulov and Y Yeshurun 141–147
- Vortex lattice mobility and effective pinning potentials in the peak effect region in YBCO crystals
G Pasquini and V Bekkeris 149–157
- Effect of pinning and driving force on the metastability effects in weakly pinned superconductors and the determination of spinodal line pertaining to order–disorder transition
A D Thakur, S S Banerjee, M J Higgins, S Ramakrishnan and A K Grover 159–177
- Pulverization of the flux line lattice, the phase coexistence and the spinodal temperature of the order–disorder transition in a weakly pinned crystal of $\text{Yb}_3\text{Rh}_4\text{Sn}_{13}$
S Sarkar, C V Tomy, A D Thakur, G Balakrishnan, D McK Paul, S Ramakrishnan and A K Grover 179–192
- Critical points in the Bragg glass phase of a weakly pinned crystal of $\text{Ca}_3\text{Rh}_4\text{Sn}_{13}$
S Sarkar, A D Thakur, C V Tomy, G Balakrishnan, D McK Paul, S Ramakrishnan and A K Grover 193–207
- Antivortices due to competing orbital and paramagnetic pair-breaking effects
U Klein 209–217
- Zeeman and orbital limiting magnetic fields in cuprates: The pseudogap connection
Lia Krusin-Elbaum, Takasada Shibauchi and Gianni Blatter 219–225
- Possible Fulde–Ferrell–Larkin–Ovchinnikov inhomogeneous superconducting state in CeCoIn_5
R Movshovich, A Bianchi, C Capan, P G Pagliuso and J L Sarrao 227–237
- Multiple superconducting phases in heavy fermion compounds $\text{PrOs}_4\text{Sb}_{12}$ and CeCoIn_5
Yuji Matsuda 239–246
- Spontaneous vortex phase (SVP) of ruthenocuprate high T_c magneto-superconductors
V P S Awana and H Kishan 247–250
- Anomalous density of states in hybrid normal metal–superconductor bilayers
A K Gupta, L Crétinon, B Pannetier and H Courtois 251–259
- Unusual vortex dynamics in the quantum-liquid phase of $a\text{-Mo}_x\text{Si}_{1-x}$ films
S Okuma 261–269
- Bitter decoration and magneto-optical observations of vortex chains in high temperature superconductors
T Tamegai, H Aoki, M Matsui and M Tokunaga 271–278

- Direct observation of rectified motion of vortices by Lorentz microscopy
*Yoshihiko Togawa, Ken Harada, Tetsuya Akashi,
 Hiroto Kasai, Tsuyoshi Matsuda, Atsutaka Maeda and Akira Tonomura* 279–287
- Experimental adiabatic vortex ratchet effect in Nb films with asymmetric
 pinning trap *J E Villegas, N O Nunez, M P Gonzalez,
 E M Gonzalez and J L Vicent* 289–294
- Three-dimensional Ginzburg–Landau simulation of a vortex line dis-
 placed by a zigzag of pinning spheres *Mauro M Doria,
 Antonio R de C Romaguera and Welles A M Morgado* 295–304
- Interlayer magnetotransport study in electron-doped $\text{Sm}_{2-x}\text{Ce}_x\text{CuO}_{4-\delta}$
*Takasada Shibauchi, Tsuyoshi Kawakami, Yuhki Terao,
 Minoru Suzuki and Lia Krusin-Elbaum* 305–312
- Electron-confined LO-phonon scattering in GaAs– $\text{Al}_{0.45}\text{Ga}_{0.55}\text{As}$ super-
 lattice *D Abouelaoualim* 455–465
- Contact angle hysteresis of liquid drops as means to measure adhesive
 energy of zein on solid substrates *L Muthuselvi and Aruna Dhathathreyan* 563–574
- Bosonization and quantum hydrodynamics *Girish S Setlur* 575–588
- Effect of interband interaction on isotope effect exponent of MgB_2 su-
 perconductors *P Udomsamuthirun, C Kumvongsa,
 A Burakorn and P Changkanarth* 589–596
- Application of maximum entropy method for the study of electron density
 distribution in SrS, BaS and PuS using powder X-ray data *R Saravanan* 1057–1065
- Damage spreading on the 3-12 lattice with competing Glauber and
 Kawasaki dynamics *Z Z Guo, Xiao-Wei Wu and Chun-An Wang* 1067–1075
- Lattice specific heat and local density of states of Ni-based dilute alloys
 at low temperature *P D Semalty, Kapil Dev and P N Ram* 1077–1092
- A study on electrodeposited $\text{Ni}_x\text{Fe}_{1-x}$ alloy films *M Bedir,
 Ö F Bakkaloğlu, İ H Karahan and M Öztaş* 1093–1104
- Geophysics**
- Thermal effects on parallel resonance energy of whistler mode wave
Devendraa Singh, Shubha Singh and R P Singh 467–472
