SUBJECT INDEX

Mathematical Physics

Construction of exact complex dynamical invariant of a two-dimensional classical system *Fakir Chand and S C Mishra* 999–1009

Exact solutions to a class of nonlinear Schrödinger-type equations
Jin-Liang Zhang and Ming-Liang Wang 1011–1022

Quantum Mechanics

Resonance-like tunneling across a barrier with adjacent wells
S Mahadevan, P Prema, S K Agarwalla, B Sahu and C S Shastry 401–413

Spectral inverse problem for q -deformed harmonic oscillator
P K Bera and J Datta 1023–1035

General Relativity and Gravitation

Magnetized cosmological models in bimetric theory of gravitation
S D Katore and R S Rane 227–237

Møller's energy in the dyadosphere of a charged black hole
Oktay Aydogdu and Mustafa Salti 239–247

Bianchi Type-V model with a perfect fluid and Λ -term
T Singh and R Chaubey 415–428

Cosmic no-hair conjecture in scalar–tensor theories
T Singh and R Chaubey 1037–1041

Dirac constraint analysis and symplectic structure of anti-self-dual Yang–Mills equations
U Camci, Z Can, Y Nutku, Y Sucu and D Yazici 1043–1053

Statistical Physics, Thermodynamics, and Nonlinear Dynamical Systems

On the exact solutions of nonlinear diffusion-reaction equations with quadratic and cubic nonlinearities
R S Kaushal, Ranjit Kumar and Awadhesh Prasad 249–256

Effect of various periodic forces on Duffing oscillator
V Ravichandran, V Chinnathambi and S Rajasekar 351–356

Breathers in ferrimagnetic systems
Tarashankar Nag, Swapan Kumar Das and Ajoy Chowdhury 429–440

Experimental observation of direct current voltage-induced phase synchronization
Haihong Li, Weiqing Liu, Qiongling Dai and Jinghua Xiao 441–447

On exact solutions of the Bogoyavlenskii equation
Yan-ze Peng and Ming Shen 449–456

Does the classically chaotic Henon–Heiles oscillator exhibit quantum chaos under intense laser fields?
Neetu Gupta and B M Deb 1055–1071

Hierarchy of rational order families of chaotic maps with an invariant measure	<i>M A Jafarizadeh, M Foroutan and S Ahadpour</i>	1073–1086
Particle Physics		
2006: Particle Physics in the Standard Model and beyond	<i>Guido Altarelli</i>	561–577
Physics prospects at a linear e^+e^- collider	<i>Saurabh D Rindani</i>	579–596
LHC/ILC/cosmology interplay	<i>Sabine Kraml</i>	597–605
Physics of extra dimensions at colliders	<i>K Sridhar</i>	607–615
Working group report: Collider Physics	<i>Sunanda Banerjee, Rohini M Godbole and Sreerup Raychaudhuri</i>	617–637
Results from solar, atmospheric and K2K experiments and future possibilities with T2K	<i>Takaaki Kajita</i>	639–653
Physics possibilities at India-based Neutrino Observatory	<i>S Uma Sankar</i>	655–663
Neutrinos as a probe of CP-violation and leptogenesis	<i>Silvia Pascoli</i>	665–680
Neutrino astronomy: Present and future	<i>Thomas McCauley</i>	681–689
New ideas in neutrino detection	<i>M R Vagins</i>	691–698
Cosmology with cosmic microwave background anisotropy	<i>Tarun Souradeep</i>	699–710
Is dark matter visible by galactic gamma rays?	<i>W de Boer</i>	711–721
Leptogenesis models and neutrino mass constraints	<i>T Hambye</i>	723–733
Working group report: Astroparticle and neutrino physics	<i>Raj Gandhi, Subhendra Mohanty and Tarun Souradeep</i>	735–742
Super B Factories	<i>D G Hitlin</i>	743–753
Puzzles in B physics	<i>Hsiang-nan Li</i>	755–762
CP-violations in B decays	<i>Y Sakai</i>	763–772
New physics hints in B decays and collider outlook	<i>George W S Hou</i>	773–782
Observable $N-\bar{N}$ oscillation, high-scale see-saw and origin of matter	<i>R N Mohapatra</i>	783–791
Split supersymmetry in brane models	<i>Ignatios Antoniadis</i>	793–802
Lepton family symmetries for neutrino masses and mixing	<i>Ernest Ma</i>	803–811
Little Higgs models and T parity	<i>Maxim Perelstein</i>	813–820
Beyond the New Standard Model in neutrino oscillations	<i>M Zralek</i>	821–833
CP violation in supersymmetry, Higgs sector and the large hadron collider	<i>Rohini M Godbole</i>	835–847
Working group report: Flavor physics and model building	<i>M K Parida and Nita Sinha</i>	849–860

- Quantum chromodynamics at hadron colliders *Vittorio Del Duca* 861–873
- Standard and SUSY Higgs production at the LHC *Robert Harlander* 875–884
- Present status of lattice QCD at nonzero T and μ *Rajiv V Gavai* 885–898
- Nucleus–nucleus collisions at RHIC: A review *Jean-Yves Ollitrault* 899–914
- Status of the quark gluon plasma search *Terry C Awes* 915–925
- Results from STAR experiment at RHIC *Bedangadas Mohanty* 927–935
- Surface structure of quark stars with magnetic fields
Prashanth Jaikumar 937–949
- The main injector particle production experiment at Fermilab
Rajendran Raja 951–960
- Working group report: Heavy-ion physics and quark-gluon plasma
Munshi G Mustafa and Sudhir Raniwala 961–981
- Working group report: Quantum chromodynamics *V Ravindran* 983–992
- Nuclear Physics**
- Elliptic flow in a hadron-string cascade model at 130 GeV energy
P K Sahu, A Ohnishi, M Isse, N Otuka and S C Phatak 257–268
- Determination of thorium and uranium contents in soil samples using SSNTD's passive method *T A Salama, U Seddik, T M Dsoky, A Ahmed Morsy and R El-Asser* 269–276
- On the integral representations of the Jost function and Coulomb off-shell Jost solution *U Laha* 357–362
- Beta decay rates for nuclei with $115 < A < 140$ for r-process nucleosynthesis *Kamales Kar, Soumya Chakravarti and V R Manfredi* 363–368
- Proton and alpha evaporation spectra in low energy ^{12}C and ^{16}O induced reactions *E T Mirgule, D R Chakrabarty, V M Datar, Suresh Kumar, A Mitra and H H Oza* 369–374
- Fourier transformation methods in the field of gamma spectrometry
A Abdel-Hafiez 457–466
- Projected shell model study of neutron-deficient ^{122}Ce
Rani Devi, B D Sehgal and S K Khosa 467–475
- Direct determination of bulk etching rate for LR-115-II solid state nuclear track detectors *T A Salama, U Seddik, T M Hegazy and A Ahmed Morsy* 529–534
- Atomic and Molecular Physics**
- A comparative performance evaluation of micro-Raman spectrograph using holographic notch filter and dielectric filter
R P Shukla, Sanjiva Kumar, A K Sinha, Manika Mallick, S Thakur and N K Sahoo 277–289

- Chain length effect on dynamical structure of poly(vinyl pyrrolidone)-polar solvent mixtures in dilute solution of dioxane studied by microwave dielectric relaxation measurement
R J Sengwa and Sonu Sankhla 375–381
- Quantum chemical study of mechanisms of dissociation and isomerization reactions in some molecules and radicals of astrophysical significance: Cyanides and related molecules
V P Gupta and Archana Sharma 487–500
- Simulated mixed absorbers and effective atomic numbers for γ attenuation
K Karunakaran Nair, N Ramachandran, K K Abdullah and K M Varier 501–506
- Photon interaction studies using ^{241}Am γ -rays
N Ramachandran, K Karunakaran Nair, K K Abdullah and K M Varier 507–517
- Laser-induced breakdown spectra of Zn_2 molecule in the violet region
Subhash C Singh, K S Ojha and R Gopal 519–527
- Measurement of storage time, estimation of ion number and study of absorption line profile in a Paul trap
Soumen Bhattacharyya, Anita Gupta, S G Nakhate and Pushpa M Rao 1087–1097
- Lasers and Optics**
- Study of fiber optic sugar sensor
A Jayanth Kumar, N M Gowri, R Venkateswara Raju, G Nirmala, B S Bellubbi and T Radha Krishna 383–387
- Control of amplification without inversion in H_2 and LiH molecules: Dependence on relative magnitude of probe and coherent field Rabi frequencies in three-level Λ system
Sulagna Dutta and Krishna Rai Dastidar 1099–1118
- Pulsed pump: Thermal effects in solid state lasers under super-Gaussian pulses
H Nadgaran and M Sabaian 1119–1128
- Fluid Dynamics**
- Self-assembled fluids with order-parameter-dependent mobility: The large- N limit
N P Rapapa and N B Maliehe 291–297
- Mode-to-mode energy transfers in convective patterns
Mahendra K Verma, Krishna Kumar and Bhaskar Kamble 1129–1140
- Plasma Physics**
- Chaotic-to-ordered state transition of cathode-sheath instabilities in DC glow discharge plasmas
Md Nurujjaman and A N Sekar Iyengar 299–304
- Experimental study of the dependence of beam current on injection magnetic field in 6.4 GHz ECR ion source
G S Taki, P R Sarma, D K Chakraborty, R K Bhandari and P K Ray 477–486
- Condensed Matter Physics**
- Organic- and molecule-based magnets
Joel S Miller 1–16

<i>Subject Index</i>	1177
Electronic properties of organic monolayers and molecular devices <i>D Vuillaume, S Lenfant, D Guerin, C Delerue, C Petit and G Salace</i>	17–32
Order and chaos in soft condensed matter <i>A K Sood and Rajesh Ganapathy</i>	33–46
Combined neutron and synchrotron studies of magnetic films <i>Sunil K Sinha, S Roy, M R Fitzsimmons, S Park, M Dorn, O Petravic, I V Roshchin, Zhi-Pan Li, X Battle, R Morales, A Misra, X Zhang, K Chesnel, J B Kortright and Ivan K Schuller</i>	47–55
Proximity effect of electron beam lithography on single-electron transistors <i>Shu-Fen Hu, Kuo-Dong Huang, Yue-Min Wan and Chin-Lung Sung</i>	57–65
Electro-optical characterization and analysis of CuPc-based solar cells with high photovoltage <i>V P Singh, R S Singh and A M Hermann</i>	67–72
What is novel in quantum transport for mesoscopics? <i>Mukunda P Das and Frederick Green</i>	73–83
Synthesis and magnetic properties of multilayer Ni/Cu and NiFe/Cu nanowires <i>R S Liu, S C Chang, I Baginskiy, S F Hu and C Y Huang</i>	85–91
Current nanoscience and nanoengineering at the Center for Nanoscale Science and Engineering <i>A M Hermann, R S Singh and V P Singh</i>	93–100
Bose–Einstein condensation: Where many become one <i>and, therefore, there is plenty of room at the bottom</i> <i>N Kumar</i>	101–112
Studies on magnetic-field-induced first-order transitions <i>P Chaddah</i>	113–119
Langmuir Blodgett multilayers and related nanostructures <i>S S Major, S S Talwar and R S Srinivasa</i>	121–134
BF ₃ -doped polyaniline: A novel conducting polymer <i>Debangshu Chaudhuri and D D Sarma</i>	135–139
Some recent investigations of materials under high pressures <i>Surinder M Sharma</i>	141–152
Metal–insulator transition in Ni-doped Na _{0.75} CoO ₂ : Insights from infrared studies <i>M Premila, A Bharathi, N Gayathri, P Yasodha, Y Hariharan and C S Sundar</i>	153–162
Recent neutron scattering research and development in India <i>S L Chaplot</i>	163–171
Strain-induced modification of magnetic structure and new magnetic phases in rare-earth epitaxial films <i>C Dufour, K Dumesnil and Ph Mangin</i>	173–190
Novel optical probe for quantum Hall system <i>Biswajit Karmakar and Brij Mohan Arora</i>	191–198

- Ballistic transport in semiconductor nanostructures: From quasi-classical oscillations to novel THz-emitters *G H Döhler, M Eckardt, A Schwanhäuser, F Renner, S Malzer, S Trumm, M Betz, F Sotier, A Leitenstorfer, G Loata, T Löffler, H Roskos, T Müller, K Unterrainer, D Driscoll, M Hanson and A C Gossard* 199–205
- Two-dimensional magnetic ordering in a multilayer structure *M K Mukhopadhyay and M K Sanyal* 207–224
- Phonon and thermal properties of achiral single wall carbon nanotubes *Prapti Saxena and Sankar P Sanyal* 305–317
- Thermodynamic and surface properties of Sb–Sn and In–Sn liquid alloys *B C Anusionwu* 319–330
- Electronic conductivity of mechanochemically synthesized nanocrystalline $\text{Ag}_{1-x}\text{Cu}_x\text{I}$ system using DC polarization technique *D Bharathi Mohan and C S Sunandana* 331–340
- Mechanical and magnetic properties of nanostructured CoNiP films *R N Emerson, C Joseph Kennady and S Ganesan* 341–349
- Isotopic effects on non-linearity, molecular radius and intermolecular free length *Ranjan Dey, Arvind K Singh, N K Soni, B S Bisht and J D Pandey* 389–394
- Metallic/semiconducting ratio of carbon nanotubes in a bundle prepared using CVD technique *Khurshed Ahmad Shah, S S Islam, H S Mavi, A K Shukla and Harsh* 395–400
- Generalized Grüneisen parameters and low temperature limit of lattice thermal expansion of cadmium and zirconium *S Sindhu and C S Menon* 535–540
- A model for the pressure dependence of diffusion in condensed matter *Kamal Kapoor, Rashmi Kumari, Narsingh Dass and Rajendra Kumar* 541–546
- Dielectric properties of KDP-type ferroelectric crystals in the presence of external electric field *Trilok Chandra Upadhyay, Ramendra Singh Bhandari and Birendra Singh Semwal* 547–552
- Vapour–liquid equilibria of the two- and three-dimensional monoatomic classical fluids interacting via double Yukawa potential *Y Pathania and P K Ahluwalia* 1141–1154
- Photonic band gap engineering in 2D photonic crystals *Yogita Kalra and R K Sinha* 1155–1164
- Modelling of the magnetic and magnetostrictive properties of high permeability Mn–Zn ferrites *R Szewczyk* 1165–1171
- Comment**
- Electron impact excitation collision strengths for neon-like Ni XIX calculated using the relativistic *R*-matrix method *K M Aggarwal and F P Keenan* C553–C557
