Indexes to Volume 68
SUBJECT INDEX

Mathematical Physics
Painlevé test for integrability for a combination of Yang’s self-dual equations for $SU(2)$ gauge fields and Charap’s equations for chiral invariant model of pion dynamics and a comparative discussion among the three
Susanto Chakraborty and Pranab Krishna Chanda 535–545

Quantum Mechanics
Effects of barrier fluctuation on the tunneling dynamics in the presence of classical chaos in a mixed quantum-classical system Aparna Saha, Bidhan Chandra Bag and Pranab Sarkar 377–387
Single photon and nonlocality Aurelien Drezet 389–396
Exact solutions to three-dimensional time-dependent Schrödinger equation Fakir Chand and S C Mishra 891–900
Quantum manifestation of systems on the macro-scale – the concept of transition state and transition amplitude wave Ram K Varma 901–911
Collective modes of a quasi-two-dimensional Bose condensate in large gas parameter regime S R Mishra, S P Ram and Arup Banerjee 913–924

Cosmology
Calculation of CWKB envelope in boson and fermion productions S Biswas and I Chowdhury 1–19

Astronomy and Astrophysics
A study of daily variation in cosmic ray intensity during high/low amplitude days Rajesh K Mishra and Rekha Agarwal Mishra 407–422
The role of pressure anisotropy on the maximum mass of cold compact stars S Karmakar, S Mukherjee, R Sharma and S D Maharaj 881–889
Third harmonics of cosmic ray intensity on quiet days at Deep River Neutron Monitoring Station M K Richharia 1007–1012

General Relativity and Gravitation
Energy–momentum localization in Marder space–time S Aygün, M Aygün and I Tarhan 21–30
On relativistic models of strange stars Ramesh Tikekar and Kanti Jotania 397–406
Bianchi Type-II inflationary models with constant deceleration parameter in general relativity C P Singh and S Kumar 707–720
Bianchi Type-V universe with a viscous fluid and A-term T Singh and R Chaubey 721–734
On the relative energy associated with space-times of diagonal metrics Murat Korunur, Mustafa Salti and Ali Havare 735–748
Subject Index

Statistical Physics

Experimental investigation of the response of a harmonically excited hard Duffing oscillator

N S Patil and A K Mallik 99–104

Synchronization and basin bifurcations in mutually coupled oscillators

U E Vincent, A N Njah and O Akinlade 749–756

Bifurcation methods of dynamical systems for handling nonlinear wave equations

Dahe Feng and Jibin Li 863–868

Particle Physics

The interfacial surface tension of a quark-gluon plasma fireball in a hadronic medium

R Ramanathan, K K Gupta, Agam K Jha and S S Singh 757–768

A calculation of the physical mass of sigma meson

J R Morones-Ibarra and Ayax Santos-Guevara 925–930

Distinguishing a SM-like MSSM Higgs boson from SM Higgs boson at muon collider

Jai Kumar Singhal, Sardar Singh and Ashok K Nagawat 931–941

Nuclear Physics

Unified approach to photo- and electro-production of mesons with arbitrary spins

G Ramachandran, M S Vidya and J Balasubramanyam 31–41

Shape evolution in $^{76,78}$Kr nuclei at high spins in tilted axis cranking Hartree–Fock–Bogoliubov approach

A Ansari, P Sharma, U R Jakhar and H L Yadav 105–110

Odd–even effect in fragment angular momentum in low-energy fission of actinides

B S Tomar, R Tripathi and A Goswami 111–116

Operation of CANDU power reactor in thorium self-sufficient fuel cycle

B R Bergelson, A S Gerasimov and G V Tikhomirov 143–150

A conceptual high flux reactor design with scope for use in ADS applications

Usha Pal and V Jagannathan 151–159

The physics of accelerator driven sub-critical reactors

S B Degweker, Biplab Ghosh, Anil Bajpai and S D Paranjape 161–171

Some parameters and conditions defining the efficiency of burners in the destruction of long-lived nuclear wastes

V V Seliverstov 173–179

Transmutation of radioactive nuclear waste – present status and requirement for the problem-oriented nuclear data base

Yu A Korovin, V V Artisyuk, A V Ignatyuk, G B Pihnov, A Yu Stankovsky, Yu E Titarenko and S G Yavshits 181–191

On the transmutation of Am in a fast lead-cooled system

B P Kochurov, V N Konev and A Yu Kwaretzheli 193–199
Transmutation of $^{129}$I, $^{237}$Np, $^{238}$Pu, $^{239}$Pu, and $^{241}$Am using neutrons produced in target-blanket system ‘Energy plus Transmutation’ by relativistic protons

J Adam, K Katovsky, A Balabekyan, V G Kalinnikov, M I Krivopustov, H Kumawat, A A Solnyshkin, V I Stegailov, S G Stetsenko, V M Tsoupko-Sitnikov and W Westmeier

Methods and computer codes for nuclear systems calculations

B P Kochurov, A P Knyazev and A Yu Kwaretzkheli

Accelerator driven systems from the radiological safety point of view

P K Sarkar and Maitreyee Nandy

Optimization studies of photo-neutron production in high-Z metallic targets using high energy electron beam for ADS and transmutation

V C Petwal, V K Senecha, K V Subbaiah, H C Soni and S Kotaiah

Electro-nuclear neutron generator – XADS at ITEP

Nuclear data requirements for accelerator driven sub-critical systems – A roadmap in the Indian context

S Ganesan

Neutron cross-sections above 20 MeV for design and modeling of accelerator driven systems

J Blomgren

Neutron total cross-sections and resonance parameters of Mo and Ta

A K M Moinul Haque Meaze, K Devan, Y S Lee, Y D Oh, G N Kim and D Son

Excitation functions of residual nuclei production from 40–2600 MeV proton-irradiated $^{206,207,208}$natPb and $^{209}$Bi

Yu E Titarenko, V F Batyaev, V M Zhivun, V O Kudryashov, K A Lipatov, A V Ignatyuk and S G Mashnik

The possibility to use ‘energy plus transmutation’ set-up for neutron production and transport benchmark studies

Measurement of neutron-induced activation cross-sections using spallation source at JINR and neutronic validation of the Dubna code

Role of $(n, xn)$ reactions in ADS, IAEA-benchmark and the Dubna Cascade Code

V Kumar, Harphool Kumawat and Manish Sharma

Utilization of the BARC critical facility for ADS related experiments

Rajeev Kumar and R Srivenkatesan
Accelerator development in India for ADS programme

Heavy density liquid metal spallation target studies for Indian ADS programme
P Satyamurthy, L M Gantayet and A K Ray 343–353

Thermal hydraulic studies of spallation target for one-way coupled Indian accelerator driven systems with low energy proton beam
V Mantha, A K Mohanty and P Satyamurthy 355–363

A numerical study of the target system of an ADSS with different flow guides
K Arul Prakash, B V Rathish Kumar and G Biswas 365–376

Beta decay rates of nuclei with $65 < A < 75$ for pre-supernova and supernova evolution
Debasish Majumdar and Kamales Kar 423–433

Microscopic interacting boson model calculations for even–even $^{128–138}$Ce nuclei
Nurettin Turkan and Ismail Maras 769–778

One-neutron stripping reactions of $^{11}$Be and $^{19}$C on light target
Rajesh Kharab, Ravinder Kumar, Pardeep Singh and H C Sharma 779–787

Evidence of self-affine multiplicity scaling of charged-particle multiplicity distribution in hadron–nucleus interaction
Dipak Ghosh, Argha Deb, Sitaram Pal and Swarnapratim Bhattacharyya 789–801

Cluster model of s- and p-shell $\Lambda\Lambda$ hypernuclei
Mohammad Shoeb, Alemiye Mamo and Amanuel Fessahatsion 943–958

A microscopic study of deformation systematics in $^{154–166}$Dy isotopes
Amita Dua, Arun Bharti and S K Khosa 1013–1018

Atomic and Molecular Physics

Vibrational dynamics of the organometallic compound triarylorganometallic antimony (V) SbPh$_3$[O$_2$CC(OH)Ph$_2$]$_2$
Tanveer Hasan, P K Singh, R Misra, P Raj and Neeraj Misra 875–880

A new four-parameter empirical potential energy function for diatomic molecules
M Rafi, Reem Al-Tuwirqi, Hanaa Farhan and I A Khan 959–965

Exact solution of the classical mechanical quadratic Zeeman effect
Sambhu N Datta and Anshu Pandey 967–982

Lasers and Optics

Measurements of photoinduced refractive index changes in bacteriorhodopsin films
Ravinder Kumar Banyal and B Raghavendra Prasad 435–441

Interferometric key readable security holograms with secret codes
Raj Kumar, D Mohan and A K Aggarwal 443–450

Effects of output coupler reflectivity on the performance of a linear cavity Brillouin/erbium fiber laser
X S Cheng, S W Harun and H Ahmad 451–456
Core temperature in super-Gaussian pumped air-clad photonic crystal fiber lasers compared with double-clad fiber lasers

_P Elahi, H Nadgaran and F Kalantarifard_ 529–534

Systematic study of spatiotemporal dynamics of intense femtosecond laser pulses in BK-7 glass

_Ram Gopal, V Deepak and S Sivaramakrishnan_ 547–569

An alternative method to specify the degree of resonator stability

_Jogy George, K Ranganathan and T P S Nathan_ 571–580

Phase knife-edge laser Schlieren diffraction interferometry with boundary diffraction wave theory

_Raj Kumar, D Mohan, Sushil K Kaura, D P Chhachhia and A K Aggarwal_ 581–589

**Fluid Dynamics**

Linear delta expansion technique for the solution of anharmonic oscillations

_P K Bera and J Datta_ 117–122

**Plasma Physics**

Optimization of C\textsuperscript{5+} Balmer-α line intensity at 182 Å from laser-produced carbon plasma

_A Chowdhury, R A Joshi, P A Naik and P D Gupta_ 43–49

Diffusion-induced parametric dispersion and amplification in doped semiconductor plasmas

_N Yadav and S Ghosh_ 123–128

Diffusion and transport phenomena in a collisional magnetoplasma having both streaming and temperature anisotropy: Collisional kinetics

_J N Mohanty, K C Baral and G Nath_ 457–466

A method for calculating active feedback system to provide vertical position control of plasma in a tokamak

_Nizami Gasilov_ 591–602

Detection of accelerated particles from pulsed plasma discharge using solid state nuclear track detector

_G M El-Aragi, U Seddik and A Abd El-Haliem_ 603–609

Effect of upflowing field-aligned electron beams on the electron cyclotron waves in the auroral magnetosphere

_Sushil Kumar, S K Singh and A K Gwal_ 611–622

Plasma treatment of polyester fabric to impart the water repellency property

_C J Jahagirdar and L B Tiwari_ 623–630

Application of inertia-induced excitation theory for nonlinear acoustic modes in colloidal plasma equilibrium flow

_P K Karmakar_ 631–648

**Condensed Matter Physics**

Synthesis of carbon nanotubes by catalytic vapor decomposition (CVD) method: Optimization of various parameters for the maximum yield

_Kanchan M Samant, Santosh K Haram and Sudhir Kapoor_ 51–60

On non-extensive nature of thermal conductivity

_Ashok Razdan_ 61–65

Electron–electron interactions and the electrical resistivity of lithium at low temperatures

_O N Awasthi and V K Pandhir_ 67–74
The kinetics of Cr layer coated on TiNi films for hydrogen absorption
M Singh, Vaibhav Kulsherstha, Anil Kumar, N K Acharaya and Y K Vijay 75–81

Giant magnetoresistance of electrodeposited Cu–Co–Ni alloy films
I H Karahan, Ö F Bakkalığlu and M Bedir 83–90

Electronic structure of hafnium: A Compton profile study
S Khera, S Mathur and B L Ahuja 91–98

Analysis of thermal expansivity of iron (Fe) metal at ultra high temperature and pressure
Deepika Kandpal and B R K Gupta 129–134

Characteristics of photoconductivity in thallium monosulfide single crystals
I M Ashraf, H A Elshaikh and A M Badr 467–479

Piezoelectricity in quasicrystals: A group-theoretical study
K Rama Mohana Rao, P Hemagiri Rao and B S K Chaitanya 481–487

Degradation process in organic thin film devices fabricated using P3HT
Rashmi, Ashok K Kapoor, Upendra Kumar, V R Balakrishnan and P K Basu 489–498

Theoretical evaluation of the electron paramagnetic resonance spin Hamiltonian parameters for the impurity displacements for Fe$^{3+}$ and Ru$^{3+}$ in corundum
Q Fu, S Y Wu, J Z Lin and J S Yao 499–506

Contribution of backscattered electrons to the total electron yield produced in collisions of 8–28 keV electrons with tungsten
R K Yadav and R Shanker 507–515

Energy and angular distributions of backscattered electrons from collisions of 5 keV electrons with thick Al, Ti, Ag, W and Pt targets
R K Yadav and R Shanker 517–528

Structural phase transition and elastic properties of thorium pnictides at high pressure
Kuldeep Kholiya and B R K Gupta 649–654

Atomic displacements in bcc dilute alloys
Hitesh Sharma and S Prakash 655–677

Synthesis and characterization of Mn$^{2+}$-doped ZnS nanoparticles
B S Rema Devi, R Raveendran and A V Vaidyan 679–687

Damage spreading on networks: Clustering effects
Xiao-Wei Wu and Chun-An Wang 689–699

Frequency dependence of junction capacitance of BPW34 and BPW41 p–i–n photodiodes
Habibe Bayhan and Şadan Özden 701–706

Stress and mixed boundary conditions for two-dimensional dodecagonal quasi-crystal plates
Yang Gao, Si-peng Xu and Bao-sheng Zhao 803–817

Hartree–Fock variational bounds for ground state energy of chargeless fermions with finite magnetic moment in the presence of a hard core potential: A stable ferromagnetic state
Sudhanshu S Jha and S D Mahanti 819–830

**Experimental Techniques and Instrumentation**

- Corrosion behavior of low energy, high temperature nitrogen ion-implanted AISI 304 stainless steel | M Ghoranneviss, A Shokouhy, M M Larijani, S H Haji Hosseini, M Yari, A Anvari, M Gholipur Shahraki, A H Sari and M R Hantehzadeh | 135–140 |
- On a low intensity \(^{241}\)Am Compton spectrometer for measurement of electron momentum density | B L Ahuja and N L Heda | 843–850 |
- Measurement of atomic number and mass attenuation coefficient in magnesium ferrite | R H Kadam, S T Alone, G K Bichile and K M Jadhav | 869–874 |
- A high resolution X-ray crystal spectrometer to study electron and heavy-ion impact atomic collisions | Ajay Kumar, D Misra, A H Kelkar, U R Kadhane, K V Thulasiram and Lokesh C Tribedi | 983–994 |
