

# Indexes to Volume 69

## SUBJECT INDEX

### Quantum Mechanics

Ray space ‘Riccati’ evolution and geometric phases for  $N$ -level quantum systems  
*S Chaturvedi, E Ercolessi, G Marmo, G Morandi, N Mukunda and R Simon* 317–327

Quality of potential harmonics expansion method for dilute Bose–Einstein condensate  
*Anasuya Kundu and Barnali Chakrabarti* 329–336

### General Relativity and Gravitation

A little reminiscence *A K Raychaudhuri* 3–5

A K Raychaudhuri and his equation *J Ehlers* 7–14

On the Raychaudhuri equation *George F R Ellis* 15–22

Singularity: Raychaudhuri equation once again *Naresh Dadhich* 23–29

A singularity theorem based on spatial averages *J M M Senovilla* 31–47

The Raychaudhuri equations: A brief review  
*Sayan Kar and Soumitra SenGupta* 49–76

Black hole dynamics in general relativity *Abhay Ashtekar* 77–92

String theory and cosmological singularities *Sumit R Das* 93–108

Horizons in 2+1-dimensional collapse of particles  
*Dieter Brill, Puneet Khetarpal and Vijay Kaul* 109–118

On the genericity of spacetime singularities *Pankaj S Joshi* 119–135

On a Raychaudhuri equation for hot gravitating fluids  
*Chandrasekher Mukku, Swadesh M Mahajan and Bindu A Bambah* 137–145

Raychaudhuri equation in quantum gravitational optics  
*N Ahmadi and M Nouri-Zonoz* 147–157

Bianchi Type-I, V and VI<sub>0</sub> models in modified generalized scalar–tensor theory  
*T Singh and R Chaubey* 159–166

### Particle Physics

Regge behaviour of distribution functions and  $t$  and  $x$ -evolutions of gluon distribution function at low- $x$   
*U Jamil and J K Sarma* 167–180

$q\bar{q}$  Pair production in non-Abelian gauge fields  
*S M Puzhakkal and V M Bannur* 181–190

Generalization of quasi-exactly solvable and isospectral potentials  
*P K Bera, J Datta, M M Panja and Tapas Sil* 337–367

Charmless nonleptonic  $B$  decays into scalar and pseudoscalar mesons  
*B Mawlong* 521–531

- Deviation from tri-bimaximal mixings through flavour twistors in inverted and normal hierarchical neutrino mass models  
*N Nimai Singh, Monisa Rajkhowa and Abhijit Borah* 533–549
- The LDC detector concept *Ties Behnke* 697–702
- Gamma gamma technology group *Alexander John Finch* 703–706
- Physics overview: Introduction to international linear collider physics  
*Yasuhiro Okada* 707–718
- Physics beyond the standard model and cosmological connections: A summary from LCWS06  
*K Sridhar* 719–725
- The road towards the international linear collider: Higgs, top/quantum chromodynamics, loops  
*S Heinemeyer* 727–733
- Forward tracking detectors *Klaus Mönig* 735–741
- Higgs and Electroweak Symmetry Breaking**
- Photon pairs: Quantum chromodynamics continuum and the Higgs boson  
*Edmond L Berger* 743–748
- The standard model Higgs search at the large hadron collider  
*Satyaki Bhattacharya* 749–752
- Little Higgs model effects in  $\gamma\gamma \rightarrow \gamma\gamma$   
*S Rai Choudhury, Ashok Goyal, A S Cornell and Naveen Gaur* 753–757
- Charged and neutral minimal supersymmetric standard model Higgs boson decays and measurement of  $\tan\beta$  at the compact linear collider  
*E Coniavitis and A Ferrari* 759–763
- Power losses in the international linear collider 20 mrad extraction line at 1 TeV  
*A Ferrari and Yuri Nosochkov* 765–769
- Probing CP-violating Higgs contributions in  $\gamma\gamma \rightarrow f\bar{f}$   
*Rohini M Godbole, Sabine Kraml, Saurabh D Rindani and Ritesh K Singh* 771–775
- Anomalous  $VVH$  interactions at a linear collider  
*Sudhansu S Biswal, Debajyoti Choudhury, Rohini M Godbole and Ritesh K Singh* 777–782
- Testing the minimal supersymmetric standard model with the mass of the  $W$  boson  
*S Heinemeyer, W Hollik, D Stöckinger, A M Weber and G Weiglein* 783–788
- Partially composite two-Higgs doublet model *Dong-Won Jung* 789–793
- Probing anomalous Higgs couplings at an  $e\gamma$  collider using unpolarised beams  
*Debajyoti Choudhury and Mamta* 795–800
- Search for Higgs boson in beyond standard model scenarios at large hadron collider  
*Kajari Mazumdar* 801–807
- Associated single photons and doubly-charged scalars at linear  $e^-e^-$  colliders  
*Biswarup Mukhopadhyaya and Santosh Kumar Rai* 809–813

Identifying new physics contributions in the Higgs sector at linear $e^+e^-$ colliders	<i>Santosh Kumar Rai</i>	815–818
Higgs self-coupling in the fusion channel at the international linear collider	<i>K Moenig and A Rosca</i>	819–822
Phenomenology of non-universal gaugino masses and implications for the Higgs boson decay	<i>K Huitu, J Laamanen, P N Pandita and Sourov Roy</i>	823–827
Low-scale gravity mediation in warped extra dimension and collider phenomenology on hidden sector	<i>H Itoh, N Okada and T Yamashita</i>	829–833
Model-independent approach for dark matter phenomenology: Signatures in linear colliders and cosmic positron experiments	<i>Shigeki Matsumoto and Nobuchika Okada</i>	835–838
Top squark and neutralino decays in a $R$ -parity violating model constrained by neutrino oscillation data	<i>Sujoy Poddar</i>	839–842
Testing the supersymmetric QCD Yukawa coupling in a combined LHC/ILC analysis	<i>A Freitas and P Z Skands</i>	843–847
Probing space–time structure of new physics with polarized beams at the international linear collider	<i>B Ananthanarayan</i>	849–854
Signals of universal extra dimension at the international linear collider	<i>Biplob Bhattacharjee</i>	855–860
Higher-order corrected Higgs bosons in FeynHiggs2.4	<i>T Hahn, S Heinemeyer, W Hollik, H Rzehak, G Weiglein and K Williams</i>	861–869
Extra dimension searches at hadron colliders to next-to-leading order-QCD	<i>M C Kumar, Prakash Mathews and V Ravindran</i>	871–876
Distinguishing new physics scenarios with polarized electron and positron beams	<i>A A Pankov, N Paver and A V Tsytrinov</i>	877–881
Transverse polarization in $\gamma Z, HZ$ production	<i>Saurabh D Rindani</i>	883–887
Higher curvature effects in Arkani-Hamed–Dimopoulos–Dvali and Randall–Sundrum models	<i>T G Rizzo</i>	889–894
Event-shape of dileptons plus missing energy at a linear collider as a supersymmetry/Arkani-Hamed–Dimopoulos–Dvali discriminant	<i>Probir Roy</i>	895–901
Probing universal extra dimension at the international linear collider	<i>Gautam Bhattacharyya</i>	903–907
Littlest Higgs model and $W$ pair production at international linear collider	<i>P Poulose</i>	909–913
Lepton distribution in top decay: A probe of new physics and top-polarization	<i>Rohini M Godbole, Saurabh D Rindani and Ritesh K Singh</i>	915–919
Scalar top study: Detector optimization	<i>C Milstène and A Sopczak</i>	921–926

- Measuring Higgs CP properties through top quark production at a photon collider *Eri Asakawa* 927–930
- Heavy neutral MSSM Higgs bosons at the photon linear collider – a comparison of two analyses *M Spira, P Nieżurawski, M Krawczyk and A F Żarnecki* 931–935
- Photon collider beam simulation with CAIN *Aleksander Filip Żarnecki* 937–941
- Results from GRACE/SUSY at one-loop *J Fujimoto, T Ishikawa, M Jimbo, T Kaneko, T Kon, Y Kurihara, M Kuroda, Y Shimizu and Y Yasui* 943–946
- Electroweak precision data and gravitino dark matter *S Heinemeyer* 947–951
- Meeting to discuss laser cavity design for photon linear collider – Daresbury, UK, 10 January 2006 *Alexander John Finch* 953–956
- Ultimate parameters of the photon collider at the international linear collider *V I Telnov* 957–961
- CMOS monolithic pixel sensors research and development at LBNL *D Contarato, J-M Bussat, P Denes, L Greiner, T Kim, T Stezelberger, H Wieman, M Battaglia, B Hooberman and L Tompkins* 963–967
- Status on the development of front-end and readout electronics for large silicon trackers *J David, M Dhellot, J-F Genat, F Kapusta, H Lebbolo, T-H Pham, F Rossel, A Savoy-Navarro, E Deumens, P Malisse, D Fougeron, R Hermel, Y Karyotakis and S Vilalte* 969–975
- Preliminary thoughts on the data acquisition for the next generation of silicon tracking systems *J F Genat and A Savoy-Navarro* 977–980
- A beam test of prototype time projection chamber using micro-pattern gas detectors at KEK *Makoto Kobayashi* 981–987
- Studies on the drift properties and spatial resolution using a microMEGAS-equipped time projection chamber *Rosario L Reserva, Dennis C Arogancia, Angelina M Bacala, Khalil Boudjemline, Dan Burke, Paul Colas, Madhu Dixit, Arnaud Giganon, Ioannis Giomataris, Hermogenes C Gooc Jr, Yukihiko Kato, Keisuke Fujii, Hiroyuki Fujishima, Masahiro Habu, Takatoshi Higashi, Makoto Kobayashi, Hirotoshi Kuroiwa, Vincent Lepeltier, Takeshi Matsuda, Osamu Nitoh, Kirsten Sachs, Ronald Dean Settles, Akira Sugiyama, Philippe Rosier, Sachio Matsushita, Keiichi Nakamura, Takashi Watanabe, Atsushi Yamaguchi, Hiroshi Yamaoka and Thomas Zerguerras* 989–994
- Small visible energy scalar top iterative discriminant analysis *A Sopczak, A Finch, A Freitas, C Milstène and M Schmitt* 995–999
- Linear Collider Flavour Identification status report: Sensors for the International Linear Collider *K D Stefanov* 1001–1008

Monolithic CMOS pixel detector for international linear collider vertex detection	<i>J E Brau, O Igonkina, N Sinev, D Strom, C Baltay, W Emmet, H Neal and D Rabinowitz</i>	1009–1013
Preliminary results from India-based Neutrino Observatory detector R&D programme	<i>Sarika Bhide, V M Datar, Satyajit Jena, S D Kalmani, N K Mondal, G K Padmashree, B Satyanarayana, R R Shinde and P Verma</i>	1015–1023
An electromagnetic calorimeter for the silicon detector concept	<i>J E Brau, R E Frey, D Strom, M Breidenbach, D Freytag, N Graf, G Haller, R Herbst, J Jaros, T Nelsen, V Radeka, B Holbrook, R Lander, M Tripathi and Y Karyotakis</i>	1025–1030
CALICE scintillator hadron calorimeter prototype commissioning and calibration	<i>J Cvach</i>	1031–1036
The 4th concept detector	<i>John Hauptman</i>	1037–1046
Muon identification and pion rejection in the 4th concept	<i>John Hauptman</i>	1047–1050
Systematic studies of small scintillators for new sampling calorimeter	<i>E P Jacosalem, S Iba, N Nakajima, H Ono, A L C Sanchez, A M Bacala and H Miyata,</i>	1051–1056
Software studies of GLD calorimeter	<i>H Matsunaga</i>	1057–1061
CALICE silicon–tungsten electromagnetic calorimeter	<i>G Mavromanolakis</i>	1063–1067
Understanding the performance of CMS calorimeter	<i>Seema Sharma</i>	1069–1074
Evolution of the dual-readout calorimeter	<i>Aldo Penzo</i>	1075–1078
Development of MPPC	<i>Tohru Takeshita</i>	1079–1083
Silicon detector technology development in India for the participation in international experiments	<i>Anita Topkar, S Praveenkumar, Bharti Aggarwal, S K Kataria and M D Ghodgaonkar</i>	1085–1088
Software for the international linear collider: Simulation and reconstruction frameworks	<i>Ties Behnke and Frank Gaede</i>	1089–1092
Investigations into properties of charge traps created in CCDs by neutron and electron irradiation	<i>James E Brau, Olga Igonkina, Nikolai B Sinev and Jan Strube</i>	1093–1096
Calorimeter energy calibration using the energy conservation law	<i>Vasily L Morgunov</i>	1097–1100
Particle flow calorimetry at the international linear collider	<i>Mark A Thomson</i>	1101–1107
Event reconstruction with MarlinReco at the International Linear Collider	<i>O Wendt, F Gaede and T Krämer</i>	1109–1114
Performance of GLD detector	<i>T Yoshioka</i>	1115–1118

- New final doublets and power densities for the international linear collider small crossing angle layout *R Appleby and P Bambade* 1119–1122
- The impact of BeamCal performance at different international linear collider beam parameters and crossing angles on  $\tilde{\tau}$  searches  
*P Bambade, V Drugakov and W Lohmann* 1123–1127
- The interaction region of the large detector concept *K Buesser* 1129–1132
- International linear collider simulations using BDSIM  
*J Carter, I Agapov, G A Blair and O Dadoun* 1133–1136
- The stabilisation of final focus system *P A Coe, D Urner and A Reichold* 1137–1140
- Study of charged and neutral minimal supersymmetric standard model Higgs boson decays and measurement of  $\tan\beta$  at the compact linear collider  
*E Coniavitis and A Ferrari* 1141–1145
- A laser-wire system for the International Linear Collider  
*Nicolas Delerue, Sudhir Dixit, Fred Gannaway, David Howell, Myriam Qurshi, Grahame Blair, Stewart Boogert, Gary Boorman, Chafik Driouichi, Lawrence Deacon, Alexander Aryshev, Pavel Karataev, Nobuhiro Terunuma, Junji Urakawa, Axel Brachmann, Joe Frisch and Marc Ross* 1147–1150
- Fast and precise luminosity measurement at the international linear collider *C Grah* 1151–1157
- The stimulated Breit–Wheeler process as a source of background  $e^+e^-$  pairs at the international linear collider *A Hartin* 1159–1164
- The E166 experiment: Development of an undulator-based polarized positron source for the international linear collider  
*J Kovermann, A Stahl, A A Mikhailichenko, D Scott, G A Moortgat-Pick, V Gharibyan, P Pahl, R Pöschl, K P Schüler, K Laihem, S Riemann, A Schälicke, R Dollan, H Kolanoski, T Lohse, T Schweizer, K T McDonald, Y Batygin, V Bharadwaj, G Bower, F-J Decker, C Hast, R Iverson, J C Sheppard, Z Szalata, D Walz, A Weidemann, G Alexander, E Reinherz-Aronis, S Berridge, W Bugg and Y Efrimenko* 1165–1169
- Study on low-energy positron polarimetry *A Schälicke, G Alexander, R Dollan, K Laihem, T Lohse, S Riemann, P Starovoitov and A Ushakov* 1171–1175
- The lay-out of the photon collider at the international linear collider *V I Telnov* 1177–1179
- Detector issues for a photon collider *Klaus Mönig* 1181–1184
- Data acquisition in the EUDET project *J Mních and M Wing* 1185–1189

Very forward calorimeters readout and machine interface	<i>Wojciech Wierba</i>	1191–1193
Detector and trigger challenge for supersymmetrical dark matter scenarios at the international linear collider	<i>Z Zhang</i>	1195–1198
New developments of the R&D silicon tracking for linear collider on silicon trackers	<i>A Savoy-Navarro</i>	1199–1206
Physics issues on triggering	<i>Klaus Mönig</i>	1207–1208
Test-beam programs for devices to measure luminosity and energy and optimize the luminosity	<i>W Lohmann</i>	1209–1214
Concluding remarks	<i>Rohini M Godbole</i>	1215–1219
<b>Nuclear Physics</b>		
Single-sheet identification method of heavy charged particles using solid state nuclear track detectors	<i>M F Zaki, A Abdel-Naby and A Ahmed Morsy</i>	191–198
Beta-transition properties for neutron-rich Sn and Te isotopes by Pyatov method	<i>D I Salamov, S Unlu and N Cakmak</i>	369–375
Background neutron in the endcap and barrel regions of resistive plate chamber for compact muon solenoid/large hadron collider using GEANT4	<i>J T Rhee, M Jamil, Christopher Joen, Bingzhu Yin and Y J Jeon</i>	377–386
Development of 2D particle-in-cell code to simulate high current, low energy beam in a beam transport system	<i>S C L Srivastava, S V L S Rao and P Singh</i>	551–566
Particularization of alpha contamination using CR-39 track detectors	<i>M F Zaki and Y H El-Shaer</i>	567–574
Neutron response study using poly allyl diglycol carbonate	<i>Basma A El-Badry, M F Zaki, Tarek M Hegazy and A Ahmed Morsy</i>	669–674
<b>Atomic and Molecular Physics</b>		
Measurement of mass attenuation coefficients in some Cr, Co and Fe compounds around the absorption edge and the validity of the mixture rule	<i>U Turgut, O Şimşek and E Büyükkasap</i>	199–207
Collision strengths for transitions in Ni XIX	<i>K M Aggarwal and F P Keenan</i>	209–218
Theoretical approach to the magnetic properties of Mn(II), Cr(III), and Cu(II) complexes in the newly reported 12- and 15-membered macrocyclic ligands	<i>Ali Bayri and Mustafa Karakaplan</i>	301–306
Computation of triple differential cross-sections with the inclusion of exchange effects in atomic K-shell ionization by relativistic electrons for symmetric geometry	<i>S Dhar and M R Alam</i>	387–394
Lifetime measurement of some excited states belonging to the 3p <sup>4</sup> nd (n=4–6) configuration of ArII	<i>S Karmakar and M B Das</i>	477–480

- Normal coordinate analysis and quantum chemical study of tris(*p*-fluorophenyl)antimony di(*N*-phenylglycinate) [ $(p\text{-FC}_6\text{H}_4)_3\text{Sb}(\text{O}_2\text{CCH}_2\text{NHC}_6\text{H}_5)_2$ ] *Tanveer Hasan, P K Singh, K Singhal, P Raj and Neeraj Misra* 675–680
- Optics**
- Single-photon all-optical switching using coupled microring resonators *Wenge Yang, Amitabh Joshi and Min Xiao* 219–228
- Nonlinearity management and diffraction management for the stabilization of two-dimensional spatial solitons *P A Subha, C P Jisha and V C Kuriakose* 229–239
- Optical parametric amplification beyond the slowly varying amplitude approximation *M Hosseini Farzad* 395–409
- Perturbative effects on ultra-short soliton self-switching *Amarendra K Sarma and Ajit Kumar* 575–587
- Acoustics**
- Photoacoustic spectroscopy of thin films of  $\text{As}_2\text{S}_3$ ,  $\text{As}_2\text{Se}_3$  and  $\text{GeSe}_2$  *Seema Kandpal and R P S Kushwaha* 481–484
- Heat Transfer**
- Analytical prediction of forced convective heat transfer of fluids embedded with nanostructured materials (nanofluids) *V Vasu, K Rama Krishna and A C S Kumar* 411–421
- Plasma Physics**
- Propagation of ion-acoustic waves in a dusty plasma with non-isothermal electrons *K K Mondal* 241–253
- Gauss law constraints on Debye–Hückel screening *Ritesh Kumar Dubey, V J Menon, Madhukar Mishra, Mukesh Kumar Pandey and B K Patra* 423–433
- Condensed Mater Physics**
- Atomic displacements due to interstitial hydrogen in Cu and Pd *Hitesh Sharma and S Prakash* 255–265
- Appearance of an inhomogeneous superconducting state in  $\text{La}_{0.67}\text{Sr}_{0.33}\text{MnO}_3\text{-YBa}_2\text{Cu}_3\text{O}_7\text{-La}_{0.67}\text{Sr}_{0.33}\text{MnO}_3$  trilayers *K Senapati and R C Budhani* 267–275
- Synthesis and characterization of silica–gold core-shell ( $\text{SiO}_2\text{@Au}$ ) nanoparticles *Deepika Kandpal, Suchita Kalele and S K Kulkarni* 277–283
- Equation of state for inert gas solids *Kamal Devlal and B R K Gupta* 307–312
- Theoretical explanation of electron paramagnetic resonance and optical parameters for  $\text{Cu}^{2+}$  ion in  $\text{LiNbO}_3$  crystal *S Ravi and P Subramanian* 313–316

- Variation of long periodicity in blends of styrene butadiene, styrene copolymer/polyaniline using small angle X-ray scattering data  
*B G Soares, Fernando G Souza Jr, A Manjunath, H Somashekarappa, R Somashekar and Siddaramaiah* 435–443
- Temperature variation of higher-order elastic constants of MgO  
*K M Raju, R K Srivastava and Kailash* 445–450
- Electron paramagnetic resonance parameters and local structure for  $Gd^{3+}$  in  $KY_3F_{10}$   
*Shao-Yi Wu, Hua-Ming Zhang, Guang-Duo Lu and Zhi-Hong Zhang* 451–457
- Electrical conduction mechanism of polyvinyl chloride (PVC)–polymethyl methacrylate (PMMA) blend film  
*R S Gulalkari, Y G Bakale, D K Burghate and V S Deogaonkar* 485–490
- Fifty years of Szigeti's dielectric theory – A review  
*D B Sirdeshmukh, L Sirdeshmukh and K G Subhadra* 491–520
- Interionic pair potentials and partial structure factors of compound-forming quaternary NaSn liquid alloy: First principle approach  
*Anil Thakur and P K Ahluwalia* 589–602
- Surface segregation of the metal impurity to the (100) surface of fcc metals  
*Jian-Min Zhang, Bo Wang and Ke-Wei Xu* 603–616
- Creation evidence of the second non-dispersive Zakharenko wave by helium atomic beams in superfluid helium-II at low temperatures  
*A A Zakharenko* 617–629
- A variable electron beam and its irradiation effect on optical and electrical properties of CdS thin films  
*M Singh, Y K Vijay and B K Sharma* 631–639
- A general approach to bosonization  
*Girish S Setlur and V Meera* 639–650
- Density of states in an electrically biased quantum well  
*A Khan, S Sinha and P Panchadhyayee* 651–659
- Electron transport through SWNT/*trans*-PA/SWNT structure (the role of solitons): A t-matrix technique  
*S A Ketabi, H Milani Moghaddam and N Shahtahmasebi* 661–668
- Composition dependence of density of states in  $a\text{-Se}_{100-x}\text{Sn}_x$  thin films  
*N Sharma, S P Singh and S Kumar* 681–692
- Estimation of various scattering parameters and 2-DEG mobilities from electron mobility calculations in the three conduction bands  $\Gamma$ , L and X of gallium arsenide  
*Sonal Singhal, A K Saxena and S Dasgupta* 687–692
- Materials Science**
- \*Hydrogenated nanocrystalline silicon germanium thin films  
*A R M Yusoff, M N Syahrul and K Henkel* 285–300

---
