ISIS Facility – Past achievements and future prospects

USCHI STEIGENBERGER
ISIS Facility
E-mail: U.E.Steigenberger@rl.ac.uk

Abstract. The current status of the ISIS Pulsed Neutron and Muon Facility will be described covering operations and developments. Construction of a second target station was approved in 2004 including funding for the first seven neutron scattering instruments. Progress with the second target station project will be reviewed and updates on the design status of the seven ‘Day One’ instruments, as well as plans for the next phase of the instrumentation will be presented.

Keywords. Neutron scattering; spallation neutron sources.
