1032  Circadian Rhythms
Circadian Timing Systems: How are they Organized?
Koustubh M Vaze and Vijay Kumar Sharma

Individual waves propagate with phase velocity \( v_p \)

Envelope of superimposed waves propagates with group velocity \( v_g \)
Modern fluorescence techniques allow the catalytic activity of single immobilized enzymes to be observed in real time. Adapted from Figure 2 of article on page 969.

Leonor Michaelis (1875–1949)
Maud Leonora Menten (1879–1960)
